The Logic of Adaptive Sequential Experimentation in Policy Design Haipeng Xing,Xiaobo Zhang,2013-06-26

Inspired by the wide adoption of rigorous randomized controlled trials RCTs in medical research economists and other social scientists have increasingly used RCTs in their research As researchers pick up projects amenable to the RCT methodology they likely leave out important questions to which RCTs cannot be directly applied As a result RCTs have been criticized for the proclivity of addressing trivial questions As a matter of fact in medical research RCTs are an integral part of adaptive sequential experiment design a few steps must be taken to screen out drugs that have toxins and strong side effects before running any RCTs on humans In this paper we argue that economists can learn a great deal from the design principles implemented in medical research We develop a theoretical model to show the logic of adaptive sequential experiment design in the presence of uncertainty over negative effects and discuss how to choose samples in a population to minimize the experiment cost We also point out the applications of our proposed framework in the economic domain such as economic reforms and new product design

Experimentation Works Stefan H. Thomke,2020-02-18 Don't fly blind See how the power of experiments works for you When it comes to improving customer experiences trying out new business models or developing new products even the most experienced managers often get it wrong They discover that intuition experience and big data alone don't work What does Running disciplined business experiments And what if companies roll out new products or introduce new customer experiences without running these experiments They fly blind That's what Harvard Business School professor Stefan Thomke shows in this rigorously researched and eye opening book It guides you through best practices in business experimentation illustrates how these practices work at leading companies and answers some fundamental questions What makes a good experiment How do you test in online and brick and mortar businesses In B2B and B2C How do you build an experimentation culture Also best practice means running many experiments Indeed some hugely successful companies such as Amazon Booking.com and Microsoft run tens of thousands of controlled experiments annually engaging millions of users Thomke shows us how these and many other organizations prove that experimentation provides significant competitive advantage How can managers create this capability at their own companies Essential is developing an experimentation organization that prizes the science of testing and puts the discipline of experimentation at the center of its innovation process While it once took companies years to develop the tools for such large scale experiments advances in technology have put these tools at the fingertips of almost any business professional By combining the power of software and the rigor of controlled experiments today's managers can make better decisions create magical customer experiences and generate big financial returns Experimentation Works is your guidebook to a truly new way of thinking and innovating

Organizing for the New Normal Constantinos C. Markides,2021-04-03 We live in a world of continuous disruption Before we have a chance to respond to one disruption another hits Before we finish one transformation journey we need to embark

on another How do you prepare the organization for this new normal of continuous disruption This is the challenge that every organization is now facing no matter how successful their digital transformation of the past decade has been Organizing for the New Normal explores how to prepare the organization for this unique challenge How do you develop a strategy for what is coming next while you are busily driving your current transformation And how do you convince emotionally exhausted employees to join you on the journey The book does not provide a ready made recipe for success but rather explores how to put together the ingredients that will improve the odds of success Organizing for the New Normal outlines the leadership competencies critical for success in the new normal such as How to create a permanent sense of urgency and an organization wide unease with the status quo How to convince people to exploit disruption as an opportunity when all they see around them are the negative consequences of disruption How to institutionalize into the DNA of the organization the day to day behaviors that would allow us to identify and respond to change early and how to achieve this in a decentralized way How to develop a strategic response that is innovative and aims to attack the disruption rather than defend against it

Experimentation Matters Stefan H. Thomke,2003-08-05 Every company s ability to innovate depends on a process of experimentation whereby new products and services are created and existing ones improved But the cost of experimentation is limiting New technologies including computer modeling and simulation promise to lift that constraint by changing the economics of experimentation They amplify the impact of learning creating the potential for higher R D performance and innovation and new ways of creating value for customers Stefan H Thomke argues that to unlock such potential companies must not only understand the power of new technologies for experimentation but also fundamentally change their processes organization and management of innovation He shows why experimentation is so critical to innovation explains the impact of new technologies and outlines what managers must do to integrate them successfully
