The Official Washington Post Index ,1981 Encyclopedia Britannica ,1970 *Who's who in the West* ,1998 **Power Consumption Datalogger Based on Python and Raspberry PI.** Pol Planas Pulido,2020 This document describes the process to develop a datalogger based on a Raspberry Pi 3 a small single board computer and two INA219 bidirectional current and power monitor On the first hand in this document the main hardware components are briefly detailed Besides it is shown how are related with a simple schematic of connections to an easy reader understanding as well as the most relevant technical information used in this project Moreover it is explained step by step how to install the operating system for the Raspberry Pi and how to configure the Access Point AP To control the sensors for datalogging the INA219 library is required due to it contains the main methods to manage the sensors hence they are defined in this document On the other hand it is necessary to implement a general program controller to manage all the datalogger functions and communications It is shown how this

is achieved by creating its own code This program allows the interaction between the datalogger and the user to send and receive commands such as start stop or to change the configuration for example It is of great importance to note that the language of these code lines is Python 3 Finally once the implementation is done several tests to prove the system works properly are included One of the main features of this device is that it can save data in a file or different files as well as receive commands from the user hence it is demonstrated that the device can work in different ways and achieved the proposed objective
