## **Computer Artificial Intelligence:**

Artificial Intelligence B. J. Copeland, 2019-09-24 Artificial intelligence AI the ability of a digital computer or computer controlled robot to perform tasks commonly associated with intelligent beings The term is frequently applied to the project of developing systems endowed with the intellectual processes characteristic of humans such as the ability to reason discover meaning generalize or learn from past experience Since the development of the digital computer in the 1940s it has been demonstrated that computers can be programmed to carry out very complex tasks as for example discovering proofs for mathematical theorems or playing chess with great proficiency Still despite continuing advances in computer processing speed and memory capacity there are as yet no programs that can match human flexibility over wider domains or in tasks requiring much everyday knowledge On the other hand some programs have attained the performance levels of human experts and professionals in performing certain specific tasks so that artificial intelligence in this limited sense is found in applications as diverse as medical diagnosis computer search engines and voice or handwriting recognition What is intelligence All but the simplest human behaviour is ascribed to intelligence while even the most complicated insect behaviour is never taken as an indication of intelligence What is the difference Consider the behaviour of the digger wasp *Sphex ichneumonius* When the female wasp returns to her burrow with food she first deposits it on the threshold checks for intruders inside her burrow and only then if the coast is clear carries her food inside The real nature of the wasp's instinctual behaviour is revealed if the food is moved a few inches away from the entrance to her burrow while she is inside on emerging she will repeat the whole procedure as often as the food is displaced Intelligence conspicuously absent in the case of *Sphex* must include the ability to adapt to new circumstances Psychologists generally do not characterize human intelligence by just one trait but by the combination of many diverse abilities Research in AI has focused chiefly on the following components of intelligence learning reasoning problem solving perception and using language

### Artificial Intelligence History

The term artificial intelligence was coined in 1956 but AI has become more popular today thanks to increased data volumes advanced algorithms and improvements in computing power and storage Early AI research in the 1950s explored topics like problem solving and symbolic methods In the 1960s the US Department of Defense took interest in this type of work and began training computers to mimic basic human reasoning For example the Defense Advanced Research Projects Agency DARPA completed street mapping projects in the 1970s And DARPA produced intelligent personal assistants in 2003 long before Siri Alexa or Cortana were household names This early work paved the way for the automation and formal reasoning that we see in computers today including decision support systems and smart search systems that can be designed to complement and augment human abilities While Hollywood movies and science fiction novels depict AI as human like robots that take over the world the current evolution of AI technologies isn't that scary or quite that smart Instead AI has evolved to provide many specific benefits in every industry Keep reading for modern examples of artificial intelligence in health care retail and more

**Understanding the Artificial: On the Future Shape of Artificial Intelligence** Massimo Negrotti,2012-12-06 In recent years a vast literature has been produced on the feasibility of Artificial Intelligence AI The topic most frequently discussed is the concept of intelligence with efforts to demonstrate that it

is or is not transferable to the computer Only rarely has attention been focused on the concept of the artificial per se in order to clarify what kind depth and scope of performance including intelligence it could support Apart from the classic book by H A Simon *The Sciences of the Artificial* published in 1969 no serious attempt has been made to define a conceptual frame for understanding the intimate nature of intelligent machines independently of its claimed or denied human like features The general aim of this book is to discuss from different points of view what we are losing and what we are gaining from the artificial particularly from AI when we abandon the original anthropomorphic pretension There is necessarily a need for analysis of the history of AI and the limits of its plausibility in reproducing the human mind In addition the papers presented here aim at redefining the epistemology and the possible targets of the AI discipline raising problems and proposing solutions which should be understood as typical of the artificial rather than of an information based conception of man

*Computing with Instinct* Yang Cai, 2011-03-16 Simplicity in nature is the ultimate sophistication The world's magnificence has been enriched by the inner drive of instincts the profound drive of our everyday life Instinct is an inherited behavior that responds to environmental stimuli Instinctive computing is a computational simulation of biological and cognitive instincts which influence how we see feel appear think and act If we want a computer to be genuinely secure intelligent and to interact naturally with us we must give computers the ability to recognize understand and even to have primitive instincts This book *Computing with Instincts* comprises the proceedings of the Instinctive Computing Workshop held at Carnegie Mellon University in the summer of 2009 It is the first state of the art survey on this subject The book consists of three parts Instinctive Sensing Communication and Environments including new experiments with in vitro biological neurons for the control of mobile robots instinctive sound recognition texture vision visual abstraction genre in cultures human interaction with virtual world intuitive interfaces exploitive interaction and agents for smart environments
