Programming with Python for Engineers Sinan Kalkan, Onur T. Şehitoğlu, Göktürk Üçoluk, 2024-08-19 This book introduces computing and programming with undergraduate engineering students in mind. It uses Python Version 3 as the programming language chosen for its simplicity, readability, wide applicability, and large collection of libraries. After introducing engineering-related Python libraries such as NumPy, Pandas, Matplotlib, SciKit, *Programming with Python for Engineers* shows how Python can be used to implement methods common in a wide spectrum of engineering-related problems drawn from, for example, design, control, decision making, scheduling, and planning. Important features of the book include the following: The book contains interactive content for illustration of important concepts where the user can provide input and by clicking buttons trace through the steps. Each chapter is also accessible as a Jupyter Notebook page and every code piece is executable. This allows the readers to run code examples in chapters immediately to make changes and gain a better grasp of the concepts presented. The coverage of topics is complemented by illustrative examples and exercises. For instructors adopting the textbook, a solutions manual is provided at <https://sites.google.com/springernature.com/extramaterial>.
