Assess Control

- First check adherence, inhaler technique, environmental factors,[▲] and comorbid conditions.
- **Step up** if needed; reassess in 2-6 weeks
- **Step down** if possible (if asthma is well controlled for at least 3 consecutive months)

Consult with asthma specialist if Step 4 or higher is required. Consider consultation at Step 3.

Control assessment is a key element of asthma care. This involves both impairment and risk. Use of objective measures, self-reported control, and health care utilization are complementary and should be employed on an ongoing basis, depending on the individual's clinical situation.

Asthma Guidelines:

Clinical Asthma Jonathan A. Bernstein, Mark L. Levy, 2014-02-06 Enormous progress in asthma research has been made in the past 50 years including a greater understanding of its complex pathogenesis and new and more effective therapies. Consequently the scientific literature has grown vast and can be difficult to integrate. With contributions from a distinguished panel of world renowned authors *Clinical Asthma Theory and Practice* presents a comprehensive study of both the common and the more challenging problems faced by all health care personnel who treat patients with asthma. The book is divided into seven sections starting with the basics of asthma and ending with a discussion on the approach to asthma worldwide and in the primary care setting. Reflecting a strong clinical emphasis each chapter begins with a patient case study supported by essential background information on the basic science and clinical decision making process. This is followed by a discussion of clinical evaluation and management. The multidisciplinary coverage explores a range of topics including genetics, inflammation, immunology and the identification of different endotypes. Using a bench to bedside approach the book links basic science to the clinical management of asthma and explores options for improvement. The carefully selected authorship from experts worldwide presents a truly global outlook.

Asthma Management Health and Administration Development Group (Aspen Publishers), 1999 *Asthma Management Clinical Pathways Guidelines and Patient Education* is a comprehensive disease management program designed to assist clinicians in diagnosing and effectively controlling asthma. It provides detailed guidelines on all aspects of managing asthma from the initial diagnosis in the clinical examination to the treatment strategy which may include drug therapy and lifestyle modification. This essential resource also includes easy to read patient education handouts which teach and encourage patients to comply with interventions while becoming active participants in managing their chronic condition.

children contributes to these rates. However, the burden of avoidable hospitalizations remains. Collectively, people who have asthma have more than 497,000 hospitalizations annually (NHIS 2005). Furthermore, ethnic and racial disparities in asthma burden persist with significant impact on African American and Puerto Rican populations. The challenge remains to help all people who have asthma, particularly those at high risk, receive quality asthma care. Advances in science have led to an increased understanding of asthma and its mechanisms, as well as improved treatment approaches. To help health care professionals bridge the gap between current knowledge and practice, the NAEPP of the National Heart, Lung, and Blood Institute (NHLBI) has previously convened three Expert Panels to prepare guidelines for the diagnosis and management of asthma. The NAEPP Coordinating Committee (CC) under the leadership of Claude Lenfant, M.D., Director of the NHLBI, convened the first Expert Panel in 1989. The charge to that Panel was to develop a report that would provide a general approach to diagnosing and managing asthma based on current science. Published in 1991, the Expert Panel Report, *Guidelines for the Diagnosis and Management of Asthma* (EPR 1991), organized the recommendations for the treatment of asthma around four components of effective asthma management: Use of objective measures of lung function to assess the severity of asthma and to monitor the course of therapy; Environmental control measures to avoid or eliminate factors that precipitate asthma symptoms or exacerbations; Patient education that fosters a partnership among the patient, his or her family, and clinicians; Comprehensive pharmacologic therapy for long-term management designed to reverse and prevent the airway inflammation characteristic of asthma, as well as pharmacologic therapy to manage asthma exacerbations. The NAEPP recognizes that the value of clinical practice guidelines lies in their presentation of the best and most current evidence available. This report presents recommendations for the diagnosis and management of asthma that will help clinicians and patients make appropriate decisions about asthma care. *Journal of Health Care Law & Policy*, 2002 **BMJ**, 2008
