Introduction To Non Euclidean Geometry:

Introduction to Non-Euclidean Geometry Harold E. Wolfe, 2013-09-26 College level text for elementary courses covers the fifth postulate hyperbolic plane geometry and trigonometry and elliptic plane geometry and trigonometry Appendixes offer background on Euclidean geometry Numerous exercises 1945 edition [Introduction to Non-Euclidean Geometry](#) EISENREICH, 2014-06-28 An Introduction to Non Euclidean Geometry covers some introductory topics related to non Euclidian geometry including hyperbolic and elliptic geometries This book is organized into three parts encompassing eight chapters The first part provides mathematical proofs of Euclid s fifth postulate concerning the extent of a straight line and the theory of parallels The second part describes some problems in hyperbolic geometry such as cases of parallels with and without a common perpendicular This part also deals with horocycles and triangle relations The third part examines single and double elliptic geometries This book will be of great value to mathematics liberal arts and philosophy major students [Introduction to Non-Euclidean Geometry](#) Harold Eichholtz Wolfe, 2012-04-01 **Introduction to Non-Euclidean Geometry** Arthur Meier Schlesinger, 1945 [Introductory Non-Euclidean Geometry](#) Henry Parker Manning, 2013-01-30 This fine and versatile introduction begins with the theorems common to Euclidean and non Euclidean geometry and then it addresses the specific differences that constitute elliptic and hyperbolic geometry 1901 edition *An Introduction to Non-Euclidean Geometry and Its Models* Julia B. Hiles, 2006 *Non-euclidean Geometry* Henry Parker Manning, 2017-07-06 A versatile introduction to non Euclidean geometry is appropriate for both high school and college classes Its first two thirds requires just a familiarity with plane and solid geometry and trigonometry and calculus is employed only in the final part It begins with the theorems common to Euclidean and non Euclidean geometry and then it addresses the specific differences that constitute elliptic and hyperbolic geometry Major topics include hyperbolic geometry single elliptic geometry and analytic non Euclidean geometry **The Non-Euclidean Revolution** Richard J. Trudeau, 2013-12-01 Richard Trudeau confronts the fundamental question of truth and its representation through mathematical models in *The Non Euclidean Revolution* First the author analyzes geometry in its historical and philosophical setting second he examines a revolution every bit as significant as the Copernican revolution in astronomy and the Darwinian revolution in biology third on the most speculative level he questions the possibility of absolute knowledge of the world Trudeau writes in a lively entertaining and highly accessible style His book provides one of the most stimulating and personal presentations of a struggle with the nature of truth in mathematics and the physical world A portion of the book won the Plya Prize a distinguished award from the Mathematical Association of America [The Non-Euclidean Revolution](#) Richard J. Cederberg, 2013-03-09 A Course in Modern Geometries is designed for a junior senior level course for mathematics majors including those who plan to teach in secondary school Chapter 1 presents several finite geometries in an axiomatic framework Chapter 2 continues the synthetic approach as it introduces Euclid s geometry and ideas of non Euclidean geometry In Chapter 3 a new introduction to symmetry and hands on explorations of isometries precedes the extensive analytic treatment of isometries similarities and affinities A new concluding section explores isometries of space Chapter 4 presents plane projective geometry both synthetically and analytically The extensive use of matrix representations of groups of transformations in Chapters 3 4 reinforces ideas from linear algebra and serves as excellent preparation for a course in abstract algebra The new Chapter 5 uses a descriptive and exploratory approach to introduce chaos theory and fractal geometry stressing the self similarity of fractals and their generation by transformations from Chapter 3 Each chapter includes a list of suggested resources for applications or related topics in areas such as art and history The second edition also includes pointers to the web location of author developed guides for dynamic software explorations of the Poincar model isometries projectivities conics and fractals Parallel versions of these explorations are available for Cabri Geometry and Geometer s Sketchpad Judith N Cederberg is an associate professor of mathematics at St Olaf College in Minnesota **The Elements of Non-Euclidean Geometry** Julian Lowell Coolidge, 2023-07-18 This book provides an introduction to non Euclidean geometry a branch of mathematics that deviates from classical Euclidean geometry in significant ways Coolidge s approach is accessible and engaging and provides a valuable entry point to this fascinating field This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it This work is in the public domain in the United States of America and possibly other nations Within the United States you may freely copy and distribute this work as no entity individual or corporate has a copyright on the body of the work Scholars believe and we concur that this work is important enough to be preserved reproduced and made generally available to the public We appreciate your support of the preservation process and thank you for being an
