**SmokeNav - Simultaneous Localization and Mapping in Reduced Visibility Scenarios** João Pedro Machado dos Santos,2013-09-01 Simultaneous Localization and Mapping SLAM is one of the most widely researched topics in Robotics It addresses building and maintaining maps within unknown environments while the robot keeps the information about its location It is a basic requirement for autonomous mobile robotic navigation in many scenarios including military applications search and rescue environmental monitoring etc Although SLAM techniques have evolved considerably in the last years there are many situations which are not easily handled such as the case of smoky environments where commonly used range sensors for SLAM like Laser Range Finders LRF and cameras are highly disturbed by noise induced in the measurement process by particles of smoke There is an evident lack of solutions to this issue in the literature This work focuses on SLAM techniques for reduced visibility scenarios The main objective of this work is to develop and validate a SLAM technique for those scenarios using dissimilar range sensors and by evaluating their behavior in such conditions To that end a study of several laser based 2D SLAM techniques available in Robot Operating System ROS is firstly conducted All the tested approaches are evaluated and compared in 2D simulations as well as real world experiments using a mobile robot Such analysis is fundamental to decide which technique to adopt according to the final application of the work The developed technique uses the complementary characteristics between a LRF and an array of sonars in order to successfully map the aforementioned environments In order to validate the developed technique several experimental tests were conducted using a real scenario It was verified that this approach is adequate to decrease the impact of smoke particles in the mapping task However due to hardware limitations the resulting map is comprehensibly not outstanding but much better than using a

single range sensor modality This work is part of the Cooperation between Human and rObotic teams in catastroPhic INcidents CHOPIN R D project which intends to develop a support system for small scale SaR missions in urban catastrophic scenarios by exploiting the human robot symbiosis **Robot Localization and Map Building** Hanafiah Yussof,2010-03-01

**Slam Algorithms in Ros2 Mapping and Localization** Corwin Halesworth, Isandro Myles, 2025-07-26  
**Simultaneous Localization and Mapping** Zhan Wang, Gamini Dissanayake, Shoudong Huang, 2011 Simultaneous localization and mapping SLAM is a process where an autonomous vehicle builds a map of an unknown environment while concurrently generating an estimate for its location This book is concerned with computationally efficient solutions to the large scale SLAM problems using exactly sparse Extended Information Filters EIF The invaluable book also provides a comprehensive theoretical analysis of the properties of the information matrix in EIF based algorithms for SLAM Three exactly sparse information filters for SLAM are described in detail together with two efficient and exact methods for recovering the state vector and the covariance matrix Proposed algorithms are extensively evaluated both in simulation and through experiments

**Simultaneous Localization and Mapping for Mobile Robots: Introduction and Methods** Fernández-Madrugal, Juan-Antonio, 2012-09-30 As mobile robots become more common in general knowledge and practices as opposed to simply in research labs there is an increased need for the introduction and methods to Simultaneous Localization and Mapping SLAM and its techniques and concepts related to robotics Simultaneous Localization and Mapping for Mobile Robots Introduction and Methods investigates the complexities of the theory of probabilistic localization and mapping of mobile robots as well as providing the most current and concrete developments This reference source aims to be useful for practitioners graduate and postgraduate students and active researchers alike

**3D Robotic Mapping** Andreas Nüchter, 2009-01-17 Focuses on acquiring spatial models of physical environments through mobile robots The robotic mapping problem is commonly referred to as SLAM simultaneous localization and mapping 3D maps are necessary to avoid collisions with complex obstacles and to self localize in six degrees of freedom x y z position roll yaw and pitch angle New solutions to the 6D SLAM problem for 3D laser scans are proposed and a wide variety of applications are presented

**ATLAS** Michael Carsten Bosse, 2004 This thesis describes a scalable robotic navigation system that builds a map of the robot's environment on the fly This problem is also known as Simultaneous Localization and Mapping SLAM The SLAM problem has as inputs the control of the robot's motion and sensor measurements to features in the environment The desired output is the path traversed by the robot localization and a representation of the sensed environment mapping The principal contribution of this thesis is the introduction of a framework termed Atlas that alleviates the computational restrictions of previous approaches to SLAM when mapping extended environments The Atlas framework partitions the SLAM problem into a graph of submaps each with its own coordinate system Furthermore the framework facilitates the modularity of sensors map representations and local navigation algorithms by encapsulating the implementation specific algorithms into an abstracted module The challenge of loop closing is handled with a module that matches submaps and a verification

procedure that trades latency in loop closing with a lower chance of incorrect loop detections inherent with symmetric environments The framework is demonstrated with several datasets that map large indoor and urban outdoor environments using a variety of sensors a laser scanner sonar rangefinders and omni directional video

**Semantic Mapping in ROS** Xavier Gallart Del Burgo,2013 ANGL S In the last few years robots are becoming more popular in our daily lives We can see them guiding people in museums helping surgeons in hospitals and autonomously cleaning houses With the aim of enabling robots to cooperate with humans and to perform human like tasks we need to provide them with the capability of understanding human environments and representing the extracted knowledge in such a way that humans can interpret Semantic mapping can be defined as the process of building a representation of the environment incorporating semantic knowledge obtained from sensory information Semantic properties can be extracted from various sources such as objects topology of the environment size and shape of rooms and room appearance This thesis proposes an implementation of semantic mapping for mobile robots which is integrated in a framework called Robot Operating System ROS The system extracts spatial properties like rooms objects and topological information and combines them with common sense knowledge into a probabilistic framework which is capable of inferring room categories The system is tested in simulations and in real world scenarios and the results show how the system explores an unknown environment creates an accurate map detects objects infers room categories and represents the results in a map where each room is labelled according to its functionality
