    Automate This Christopher Steiner,2012-08-30 The rousing story of the last gasp of human agency and how today s best and brightest minds are endeavoring to put an end to it It used to be that to diagnose an illness interpret legal documents analyze foreign policy or write a newspaper article you needed a human being with specific skills and maybe an advanced degree or two These days high level tasks are increasingly being handled by algorithms that can do precise work not only with speed but also with nuance These bots started with human programming and logic but now their reach extends beyond what their creators ever expected In this fascinating frightening book Christopher Steiner tells the story of how algorithms took over and shows why the bot revolution is about to spill into every aspect of our lives often silently without our knowledge The May 2010 Flash Crash exposed Wall Street s reliance on trading bots to the tune of a 998 point market drop and 1 trillion in vanished market value But that was just the beginning In Automate This we meet bots that are driving cars penning haiku and writing music mistaken for Bach s They listen in on our customer service calls and figure out what Iran would do in the event of a nuclear standoff There are algorithms that can pick out the most cohesive crew of astronauts for a space mission or identify the next Jeremy Lin Some can even ingest statistics from baseball games and spit out pitch perfect sports journalism indistinguishable from that produced by humans The interaction of man and machine can make our lives easier But what will the world look like when algorithms control our hospitals our roads our culture and our national security What hap pens to businesses when we automate judgment and eliminate human instinct And what role will be left for doctors lawyers writers truck drivers and many others Who knows maybe there s a bot learning to do your job this minute

    Automate this Christopher Steiner,2012   *Experimental Methods for the Analysis of Optimization Algorithms* Thomas Bartz-Beielstein,Marco Chiarandini,Luís Paquete,Mike Preuss,2010-11-02 In operations research and computer science it is common practice to evaluate the performance of optimization algorithms on the basis of computational results and the experimental approach should follow accepted principles that guarantee the reliability and reproducibility of results However computational experiments differ from those in other sciences and the last decade has seen considerable methodological research devoted to understanding the particular features of such experiments and assessing the related statistical methods This book consists of methodological contributions on different scenarios of experimental analysis The first part overviews the main issues in the experimental analysis of algorithms and discusses the experimental cycle of algorithm development the second part treats the characterization by means of statistical distributions of algorithm performance in terms of solution quality runtime and other measures and the third part collects advanced methods from experimental design for configuring and tuning algorithms on a specific class of instances with the goal of using the least amount of experimentation The contributor list includes leading scientists in algorithm design statistical design optimization and heuristics and most chapters provide theoretical background and are enriched with case studies This book is written for researchers and

practitioners in operations research and computer science who wish to improve the experimental assessment of optimization algorithms and consequently their design   Handbook on Public Policy and Artificial Intelligence Regine Paul,Emma Carmel,Jennifer Cobbe,2024-06-05 This timely Handbook explores the relationship between public policy and artificial intelligence AI technologies across a broad range of geographical technical political and policy contexts It contributes to critical AI studies focusing on the intersection of the norms discourses policies practices and regulation that shape AI in the public sector   Automatic Algorithm Selection for Complex Simulation Problems Roland Ewald,2011-11-20 To select the most suitable simulation algorithm for a given task is often difficult This is due to intricate interactions between model features implementation details and runtime environment which may strongly affect the overall performance An automated selection of simulation algorithms supports users in setting up simulation experiments without demanding expert knowledge on simulation Roland Ewald analyzes and discusses existing approaches to solve the algorithm selection problem in the context of simulation He introduces a framework for automatic simulation algorithm selection and describes its integration into the open source modelling and simulation framework James II Its selection mechanisms are able to cope with three situations no prior knowledge is available the impact of problem features on simulator performance is unknown and a relationship between problem features and algorithm performance can be established empirically The author concludes with an experimental evaluation of the developed methods   **Learning and Intelligent Optimization** Christian Blum,Roberto Battiti,2010-07-07 LION 4 the 4th International Conference on Learning and Intelligent Op mizatioN was held during January 18 22 in Venice Italy This meeting which continues the successful series of LION conferences was aimed at exploring the intersectionsand uncharted territoriesbetween machine learning arti cial int ligence mathematical programming and algorithms for hard optimization pr lems The main purpose of the event was to bring together experts from these areas to discuss new ideas and methods challenges and opportunities in various application areas general trends and speci c developments Despite the economical crisis in 2009 which visibly a ected the submission numbers of many conferences and workshops we received an impressive n ber of 87 submissions As in previous years we o ered three di erent paper categories for submission 1 regular papers on original and unpublished work 2 shortpapersonoriginalandunpublishedwork and 3 worksfororalpres tation only Accepted papers from the rst two categories are published in the proceedings Fromthe 87 submissions that wereceived 57 fell into the rstca gory 22 into the second one and 8 into the last one After a thorough reviewing process we accepted 19 regular papers which amounts to an acceptance rate of 33% and 11 short papers for publication in the proceedings Additionally nine regular paperswere accepted as shortpapers and all eight submissions from the third category were accepted for presentation   Image Algebra and Morphological Image Processing ,1990   Image Algebra and Morphological Image Processing Paul D.
