# Seismic Waves

## Waves

Energy is transmitted in waves. The high point of a wave is called the **crest** and the low point is called the **trough**. The distance between waves from crest to crest, or trough to trough, is called the **wavelength**. The height from the centerline to the crest is called the **amplitude**.

**Study Tip**

Waves are simply types of periodic motion. Perhaps you have seen the same terminology used in functions for math class or physics class.

## Body Waves

The study of seismic waves is called **seismology**. There are two main types of seismic (earthquake) waves that tell us about the Earth's interior. **Body waves** move through the solid body of the Earth, and there are two types of these waves.

**P-waves (primary waves)** are the fastest and move in a compression/expansion motion, producing a change in volume in Earth materials as they're squeezed and let go. They slow down as they approach the outer core.

**S-waves (secondary waves)** arrive behind P-waves and travel at about half the speed. They move in an up/down perpendicular motion and only travel through solids. Body waves cause jolts during earthquakes.

## Surface Waves

**Surface waves** travel on the Earth's surface and are the slowest seismic waves. The rolling motion of these waves causes the most damage during earthquakes.

## Concept Check

- What are the main parts of a wave?
- What is seismology?
- Describe body waves and surface waves.
- Differentiate between P-waves vs. S-waves.
