The book covers:

- general programming concepts and calculations
- understanding problems and planning solutions
- writing algorithms in sequential steps
- the selection control structure
- iteration using a fixed count and do-loop
- functions and procedures
- array processing
- sequential text files and
- introduction to object-oriented programming concepts.

The book aims to encourage beginner programmers to see all problems as challenges and to seek all possible ways to solve these problems in the most effective, efficient and economical way.

Carnelia Pretorius and **Nelsie Erasmus** have been in tertiary education for more than 30 years and understand the anxieties of beginner programmers and the abstract reasoning the subject requires. It has always been their passion to encourage students to become logical thinkers and to assist them to develop problem-solving skills. This book lays a solid foundation for students who are being exposed to programming for the first time.
