Effectiveness of simulation-based interprofessional education on teamwork and communication skills in neonatal resuscitation

Shinhye Chae^{1,2} and Soonyoung Shon^{1*}

Abstract

Background The role of effective interprofessional teamwork is especially vital in the Neonatal Intensive Care Unit (NICU) where infants facing emergency situations are admitted. Proper neonatal resuscitation, facilitated by comprehensive resuscitation training, can significantly decrease the mortality rates associated with neonatal asphyxia and respiratory failure. This study aimed to develop a simulation-based interprofessional education (IPE) programme for medical staff working in a nursery and NICU and to assess its effectiveness on teamwork, communication skills, clinical performance, clinical judgement, interprofessional attitudes, and education satisfaction.

Methods Through a demand survey, neonatal resuscitation was selected as the theme, and an IPE team comprised of one doctor and two nurses was formed. The education programme consisted of three sessions lasting a total of 140 min: two simulation exercises and one theoretical education session. Data were collected from 18 nurses working in the nursery and NICU and 9 doctors working in the paediatrics department.

Results A comparison of the metrics before and after applying simulation-based IPE programmes revealed teamwork ($Z^2=2.67, p=.008$), communication skills ($Z^2=2.68, p=.007$), clinical performance ($Z^2=2.52, p=.012$), clinical judgement ($Z^2=4.52, p<.001$), and interprofessional attitude ($Z^2=3.64, p<.001$) to have significantly improved. Education satisfaction scores were 4.73 points on average out of a maximum of 5. The simulation-based IPE programme was effective in improving the teamwork, communication, and clinical performance of resuscitation teams, individual clinical judgement, and interprofessional attitude.

Conclusions Simulation-based IPE is effective for enhancing teamwork, team communication, clinical judgement skills, and clinical performance in neonatal resuscitation. This programme has the potential to contribute to the improvement of patient safety and the quality of neonatal care. Additional studies are needed to longitudinally examine the effects of the programme on patient safety and quality of neonatal care.

Opportunities and Challenges of Interprofessional Collaboration and Education Jill Thistlethwaite, Peter Musaeus, Martina Mueller-Schilling, Sophie Schlosser, 2024-04-01 Interprofessional collaboration is essential in meeting today s health challenges which demand high flexibility and innovation Many health organizations including the World Health Organization WHO demand that interprofessional collaboration should be taught and learned globally Even so interprofessional education tools have not yet been widely implemented in the curricula of medical professions incl physicians nurses pharmacists physiotherapists etc this

training usually takes place separately Collaboration is necessary in health professions education as it can allow professionals to increase their skills and help them achieve more than they would at an individual level Collaboration also allows for more open minded approaches when facing new ways of thinking When knowledge is shared healthcare employees are more encouraged to share their own ideas and concerns These achievements of interprofessionalism within health profession education not only benefit the student and employee but also optimize patient care and increase patient safety Productivity can also be increased and therefore reduce costs overall
