Each chapter deals with a specific area of the maritime business community in an effort to better understand the complicated markets to seek for a solution of economic or financial sustainability under the pressure of climate changes to discuss technology as an option for the future and finally to show how to utilise the big data set for better informed decision and policymaking that used to be unfeasible in terms of scale and capacity. Applications in Businesses and Organizations De Giovanni, Pietro, 2021-12-17 Blockchain technology has the ability to disrupt industries and transform business models since all intermediaries and stakeholders can now interact with little friction and at a fraction of the current transaction costs. Using blockchain technology firms can undergo new applications and processes by pursuing transparency and control, low bureaucracy, trustless relationships, high standards of responsibility and sustainability. As a result, business and organizations can successfully implement blockchain to grant transparency to consumers and end users, remove challenges linked to pollution, frauds, human rights abuse and other inefficiencies, as well as guaranteed traceability of goods and services by univocally identifying the provenance, inputs, quantity and quality along with their treatment and origin. Blockchain Technology Applications in Businesses and Organizations reveals the true advantages that blockchain entails for firms by creating transparent and digital transactions, resolves conflicts and exceptions and provides incentive-based mechanisms and smart contracts. This book seeks to create a clear understanding of blockchain's applications such that business leaders can see and evaluate its real advantages.
