Concept Research in Food Product Design and Development Howard R. Moskowitz, Sebastiano Porretta, Matthias Silcher, 2008-02-28 Concepts are critical for the development and marketing of products and services They constitute the blueprint for these products and services albeit at the level of consumers rather than at the technical level A good product concept can help make the product a success by guiding developers and advertising in the right direction Yet there is a dearth of both practical and scientific information about how to create and evaluate concepts There has been little or no focus on establishing knowledge bases for concepts Concept development is too often relegated to the so called fuzzy front end *Concept Research in Food Product Design and Development* remedies this inattention to product concepts by providing a unique treatment of concepts for the business professional as well as for research scientists The book begins with simple principles of concepts moves forward to methods for testing concepts and then on to more substantive areas such as establishing validity testing internationally and with children creating databases and selling in new methods for concept testing The book combines a how to business book with a detailed treatment of the different facets of concept research As such the book represents a unique contribution to business applications in food and consumer research methods The book is positioned specifically for foods to maintain a focus on a coherent set of topics *Concept Research in Food Product Design and Development* appeals to a wide variety of audiences R D marketing sensory analysts and universities alike Corporate R D professionals will learn how to create strong concepts Marketers will recognize how concepts are at the heart of their business Sensory analysts will find the book a natural extension of their interest in product features University students will understand how concept research is a critical part of the consumer connection *Concept Research in Food Product Design and Development* is the definitive innovative text in describing how to create analyze and capitalize upon new product concepts

An Introduction to Multivariate Statistical Analysis Theodore Wilbur Anderson, 1958 The multivariate normal distribution Estimation of the mean vector and the covariance matrix The distributions and uses of sample correlation coefficients The generalized T2 statistic Classification of observations The distribution of the sample covariance matrix and the sample generalized variance Testing the general linear hypothesis analysis of variance Testing independence of sets of variates Testing hypotheses of equality of covariance matrices and equality of mean vectors and covariance matrices Principal components Canonical correlation and canonical variables The distribution of certain characteristic roots and vectors that do not depend on parameters A review of some other work in multivariate analysis

A User's Guide to Business Analytics Ayanendranath Basu,2016-08-19 A User's Guide to Business Analytics provides a comprehensive discussion of statistical methods useful to the business analyst Methods are developed from a fairly basic level to accommodate readers who have limited training in the theory of statistics A substantial number of case studies and numerical illustrations using the R software package are provided for the benefit of motivated beginners who want to get a head start in analytics as well as for experts on the job who will benefit by using this text as a reference book The book is comprised of 12 chapters The first chapter focuses on business analytics along with its emergence and application and sets up a context for the whole book The next three chapters introduce R and provide a comprehensive discussion on descriptive analytics including numerical data summarization and visual analytics Chapters five through seven discuss set theory definitions and counting rules probability random variables and probability distributions with a number of business scenario examples These chapters lay down the foundation for predictive analytics and model building Chapter eight deals with statistical inference and discusses the most common testing procedures Chapters nine through twelve deal entirely with predictive analytics The chapter on regression is quite extensive dealing with model development and model complexity from a user's perspective A short chapter on tree based methods puts forth the main application areas succinctly The chapter on data mining is a good introduction to the most common machine learning algorithms The last chapter highlights the role of different time series models in analytics In all the chapters the authors showcase a number of examples and case studies and provide guidelines to users in the analytics field

Linear Regression David J. Olive,2017-04-18 This text covers both multiple linear regression and some experimental design models The text uses the response plot to visualize the model and to detect outliers does not assume that the error distribution has a known parametric distribution develops prediction intervals that work when the error distribution is unknown suggests bootstrap hypothesis tests that may be useful for inference after variable selection and develops prediction regions and large sample theory for the multivariate linear regression model that has m response variables A relationship between multivariate prediction regions and confidence regions provides a simple way to bootstrap confidence regions These confidence regions often provide a practical method for testing hypotheses There is also a chapter on generalized linear models and generalized additive models There are many R functions to produce response and residual plots to simulate prediction intervals and hypothesis tests to detect outliers and to choose response transformations for multiple linear regression or experimental design models This text is for graduates and undergraduates with a strong mathematical background The prerequisites for this text are linear algebra and a calculus based course in statistics
