

Chapter 10.10 From DNA to Protein Synthesis

Problems

What percentage of total cell protein is protein?

Background

Genetic proteins are the main structural components of living cells. In addition, they have the catalytic and regulatory functions of the living "factory". First, the specific sequence of amino acids in the DNA provides a template for synthesizing amino acids. Second, as a template, the DNA is transcribed into messenger RNA. Third, the messenger RNA is translated into amino acids. The amino acids are then joined together to form a protein.

Consider the following questions. What are the functions of amino acids? What are the functions of proteins?
