Thinking about Thinking Daniel Albert, 2024-09-11. At the root of everything we do is the knowledge we possess. We begin to acquire knowledge in infancy and never stop for the rest of our lives. Without knowledge, we would be helpless and vulnerable. But how do we acquire knowledge? Where does it come from, and how do we know if it is true or not? These questions have troubled philosophers since antiquity and gradually over millennia we have discovered the mechanisms necessary to acquire knowledge and to verify it. This book surveys these methods, starting with our most basic functions of common sense and intuition and moving on to more complex cognitive activity such as deductive and inductive inference and causality. Later, the scientific method, statistics, and probability are discussed. The book concludes with newer contributions to the field, including decision analysis, game theory, computers, and artificial intelligence. Written for a lay audience, it surveys the field of epistemology in an approachable and engaging way.

Public Epistemic Authority Johann Moritz Laux, 2022-06-29. Inter- and supranational courts derive their legitimacy partly from an institutional comparison: judges' legal expertise and the quality of judicial procedures justify a court's claim to authority towards other branches of government and other courts with overlapping jurisdiction. To provide a benchmark for assessing judicial outcomes that is compatible with democratic commitments, Johann Laux suggests a new normative category: Public Epistemic Authority (PEA). It builds on the mechanisms behind theories of collective intelligence and empirical research on judicial decision-making. PEA tracks judges' collective ability to reliably identify breaches of law. It focuses on cognitive tasks in adjudication. The author applies PEA to the Court of Justice of the European Union and offers suggestions for improving its institutional design.
