Tone Orthography and

Literacy David Roberts, Stephen L. Walter, 2021-07-15 This book presents the results of a series of literacy experiments in ten Niger Congo languages representing four language families and spanning five countries It asks the research question To what extent does full tone marking contribute to oral reading fluency comprehension and writing accuracy and does that contribution vary from language to language One of the main findings is that the ethno literacy profile of the language community and the social profile of the individual are stronger predictors of reading and writing performance than are the linguistic and orthographic profiles of the language Our data also suggest that full tone marking may be more beneficial for less educated readers and those with less experience of L1 literacy The book will bring practical help to linguists and literacy specialists in Africa and beyond who are helping to develop orthographies for tone languages It will also be of interest to cognitive psychologists exploring the reading process and researchers investigating writing systems Women in Scholarly Publishing
