

# Hybrid Annuity Model (HAM)

*Context: The pace of national highway construction is expected to slow due to the Hybrid Annuity Model (HAM).*

## Funding Structure

- 40% of the project cost provided by the government as construction support during the construction period.
- 60% of the project cost provided as annuity payments over the operations period, along with interest, to the concessionaire.

## Build, Operate, Transfer (BOT) Model

- The government grants a concession to a private company to finance, build, and operate a project.
- The company operates the project for a set period (typically 20-30 years) to recoup its investment, then transfers control back to the government.

## Engineering, Procurement, and Construction (EPC) Model

- A project delivery model where contractors handle the project from start to finish.
- EPC contracts can become expensive, and the government has less control over the construction process.

## What is Hybrid Annuity Model (HAM)?

A public-private partnership (PPP) model combining aspects of Engineering, Procurement, and Construction (EPC) and Build, Operate, Transfer (BOT) models.
