Stanford Bulletin ,2002 *The Application of Mathematics in the Engineering Disciplines* David Reeping,Kenneth J. Reid,2018-06-19 This text serves as the companion text to Introductory Engineering Mathematics which introduces common mathematical concepts we see in engineering including trigonometry calculus and functions This text assumes a level of mathematics of a high school senior plus some elements from the introductory text Additional concepts we see in engineering are also introduced specifically matrices differential equations and some introduction to series The concepts are introduced by examples rather than strict mathematical derivation As a result this text likely will not be an effective substitute for a differential equations course but by illustrating the implementation of differential equations it can be a companion to such a course We primarily use historical events as examples including failures to illustrate the use of mathematics in engineering and the intersection of the disciplines We hope you develop an appreciation for how to apply these concepts and find a new lens through which to view engineering successes and failures
