Patel,Gunamani Deheri,Harshvadan S. Patel,Shreya M. Mehta,2013-10-17 This book contains advanced level research material in the area of lubrication theory and related aspects presented by eminent researchers during the International Conference on Advances in Tribology and Engineering Systems ICATES 2013 held at Gujarat Technological University Ahmedabad India during October 15 17 2013 The material in this book represents the advanced field of tribology and reflects the work of many eminent researchers from both India and abroad The treatment of the presentations is the result of the contributions of several professionals working in the industry and academia This book will be useful for students researchers academicians and professionals working in the area of tribology in general and bearing performance characteristics in particular especially from the point of view of design This book will also appeal to researchers and professionals working in fluid film lubrication and other practical applications of tribology A wide range of topics has been included despite space and time constraints Basic concepts and fundamentals techniques have been emphasized upon while also including highly specialized topics and methods such as nanotribology bio nanotribology Care has been taken to generate interest for a wide range of readers considering the interdisciplinary nature of the subject *A Study on Analysis of Unbraced Reinforced Concrete Plane Frames with Slender Columns for Design Purpose* Jae Hoon Lee,1991 *Structures Under Shock and Impact XIII* G. Schleyer,C. A. Brebbia,2014-06-03 SUSI XIII contains the proceedings of the 13th International Conference in the successful series of Structures Under Shock and Impact Since the first meeting in Cambridge Massachusetts 1989 the conference has brought together the research works of scientists and engineers from a wide range of academic disciplines and industrial backgrounds that have an interest in the structural impact response of structures and materials The shock and impact behaviour of structures is a challenging area not only because of the obvious time dependent aspects but also due to the difficulties in specifying the external dynamic loadings boundary conditions and connection characteristics for structural design and hazard assessment and in obtaining the dynamic properties of materials Thus it is important to recognise and utilise fully the contributions and understand the emerging theoretical numerical and experimental studies on structures as well as investigations into the material properties under dynamic loading conditions Any increased knowledge will enhance our understanding of these problems and thorough forensic studies on the structural damage after accidents will lead to improved design requirements The range of topics in this very active field is ever expanding The following list of topics gives an idea of the wide number of applications covered

Impact and blast loading Energy absorbing issues Interaction between computational and experimental results Aeronautical and aerospace applications Response of reinforced concrete under impact Response of building facades to blast Seismic behaviour Structural crashworthiness Industrial accidents and explosions Hazard mitigation and assessment Active protection and security Tunnel and underground structures protection Dynamic analysis of composite structures Design against failure Damage limitation

*Improving Earthquake and Cyclone Resistance of Structures* Sekhar Chandra Dutta, 2012-01-01 In spite of mankind's triumph in taming nature for his survival and benefit succumbing to the vagaries of nature has become a regular global concern Out of the array of different catastrophes earthquakes and cyclones together are responsible for an overwhelming majority of the global damages caused by natural disasters in the last decade leaving millions homeless The loss of property and life are primarily due to failure of structures to withstand such catastrophes caused often due to lack of implementation of a few guidelines The evolution of these guidelines is rooted in understanding the principles of the mechanics that regulate the behaviour of the structures under lateral dynamic loading imparted by earthquakes and cyclones In this context *Improving Earthquake and Cyclone Resistance of Structures* guidelines for the Indian subcontinent is an attempt to introduce guidelines for the types of building structures frequently observed and built in the Indian subcontinent as well as in other developing countries The guidelines are meant for both architectural and structural features and include constructional aspects as well The book introduces these guidelines in such a manner that all aspects can be properly understood related and implemented by practising engineers and architects On the whole the book may help develop awareness and sensitized technical manpower for combating the threats posed by natural disasters like earthquakes and cyclones
