Handbook of Linguistic Annotation Nancy Ide, James Pustejovsky, 2017-06-16 This handbook offers a thorough treatment of the science of linguistic annotation. Leaders in the field guide the reader through the process of modeling, creating an annotation language, building a corpus, and evaluating it for correctness. Essential reading for both computer scientists and linguistic researchers. Linguistic annotation is an increasingly important activity in the field of computational linguistics because of its critical role in the development of language models for natural language processing applications. Part one of this book covers all phases of the linguistic annotation process from annotation scheme design and choice of representation format through both the manual and automatic annotation process, evaluation, and iterative improvement of annotation accuracy. The second part of the book includes case studies of annotation projects across the spectrum of linguistic annotation types, including morpho-syntactic tagging, syntactic analyses, a range of semantic analyses, semantic roles, named entities, sentiment and opinion, time and event, and spatial analyses, and discourse level analyses, including discourse structure, coreference, etc. Each case study addresses the various phases and processes discussed in the chapters of part one.

**Hadoop: The Definitive Guide** Tom White, 2009-05-29 Hadoop: The Definitive Guide helps you harness the power of your data. Ideal for processing large datasets, the Apache Hadoop framework is an open source implementation of the MapReduce algorithm on which Google built its empire. This comprehensive resource demonstrates how to use Hadoop to build reliable, scalable distributed systems. Programmers will find details for analyzing large datasets, and administrators will learn how to set up and run Hadoop clusters. Complete with case studies that illustrate how Hadoop solves specific problems, this book helps you use the Hadoop Distributed File System (HDFS) for storing large datasets and run distributed computations over those datasets using MapReduce. Become familiar with Hadoop's data and I/O building blocks for compression, data integrity, serialization, and persistence. Discover common pitfalls and advanced features for writing real-world MapReduce programs. Design, build, and administer a dedicated Hadoop cluster or run Hadoop in the cloud. Use Pig, a high-level query language for large-scale data processing. Take advantage of HBase, Hadoop's database for structured and semi-structured data. Learn ZooKeeper, a toolkit of coordination primitives for building distributed systems. If you have lots of data, whether it's gigabytes or petabytes, Hadoop is the perfect solution. Hadoop: The Definitive Guide is the most thorough book available on the subject. Now you have the opportunity to learn about Hadoop from a master, not only of the technology but also of common sense and plain talk. Doug Cutting, Hadoop Founder, Yahoo.

**A Practical Guide to Observational Astronomy** M. Shane Burns, 2021-09-16 A Practical Guide to Observational Astronomy provides a practical and accessible introduction to the ideas and concepts that are essential to making and analyzing astronomical observations. A key emphasis of the book is on how modern astronomy would be impossible without the extensive use of computers, both for the control of astronomical instruments and the subsequent data analysis. Astronomers now need to use software to access and assess the data they produce, so understanding how to use computers to control equipment and analyze data is as crucial to modern

astronomers as a telescope Therefore this book contains an array of practical problems for readers to test their knowledge in addition to a wealth of examples and tutorials using Python on the author s website where readers can download and create image processing scripts This is an excellent study guide or textbook for an observational astronomy course for advanced undergraduate and graduate astronomy and physics students familiar with writing and running simple Python scripts Key Features Contains the latest developments and technologies from astronomical observatories and telescope facilities on the ground and in space Accompanied by a companion website with examples tutorials Python scripts and resources Authored by an observational astronomer with over thirty years of observing and teaching experience About the Author M Shane Burns earned his BA in physics at UC San Diego in 1979 He began graduate work at UC Berkeley in 1979 where he worked on an automated search for nearby supernovae After being awarded a PhD in 1985 Professor Burns became a postdoctoral researcher at the University of Wyoming He spent the summer of 1988 as a visiting scientist at Lawrence Berkeley National Lab where he helped found the Supernova Cosmology Project SCP He continued to work as a member of the SCP group while a faculty member at Harvey Mudd College the US Air Force Academy and Colorado College The 2011 Nobel Prize in Physics was awarded to the leader of the SCP for the group s discovery of the accelerating expansion of the Universe through observations of distant supernovae During his career Professor Burns has observed using essentially all of the world s great observatories including the Keck Observatory and the Hubble Space Telescope Companion website for the book <https://mshaneburns.github.io/ObsAstro>
