**Abstract.** Under the presence of only one realization, we consider a computationally simple algorithm for estimating the intensity function of a Poisson process with exponential quadratic and cyclic of fixed frequency trends. We argue that the algorithm can successfully be used to estimate any Poisson intensity function provided that it has a parametric form.

*Key words and phrases:* Poisson process, point process, linear Poisson process, modulated Poisson process.

### 1. Introduction

Let  $X$  be a Poisson point process on the Borel measurable space  $(\mathcal{R}^d, \mathcal{B}^d)$ ,  $d \in \mathcal{N}$ , with unknown locally integrable intensity function

$$(1.1) \quad \lambda \in L_{loc}^1(\mathcal{R}^d),$$

that is,  $\lambda$  is an integrable function on every compact subset of  $\mathcal{R}^d$ . For mathematical foundations of point processes theory we refer, for example, to Daley and Vere-Jones (1972, 1988), Ripley (1976), Kallenberg (1983), Kingman (1993), Reiss (1993).

Motivated by Helmers (1995), we assume throughout that only one realization of the process  $X$  is available. Furthermore, we assume that  $X$  is observed only in a bounded Borel set (called window)  $W \subset \mathcal{R}^d$  that depends on a parameter  $N$  and expands when  $N \rightarrow \infty$ . We also assume throughout that

$$(1.2) \quad \int_{\mathcal{R}^d} \lambda(x) dx (= EX(\mathcal{R}^d)) = \infty$$

(cf., for example, Subsection 6.3 on pp. 136–137 of Rathbun and Cressie (1994) for a discussion concerning the necessity of assumption (1.2) in this context).

*Estimation in Poisson Processes* Pratap Narain Misra, 1973      [Statistical Inference for Spatial Poisson Processes](#) Yu A. Kutoyants, 2012-12-06 This work is devoted to several problems of parametric mainly and nonparametric estimation through the observation of Poisson processes defined on general spaces Poisson processes are quite popular in applied research and therefore they attract the attention of many statisticians There are a lot of good books on point processes and many of them contain chapters devoted to statistical inference for general and particular models of processes There are even chapters on statistical estimation problems for inhomogeneous Poisson processes in asymptotic statements Nevertheless it seems that the asymptotic theory of estimation for nonlinear models of Poisson processes needs some development Here nonlinear means the models of inhomogeneous Poisson processes with intensity function nonlinearly depending on unknown parameters In such situations the estimators usually cannot be written in exact form and are given as solutions of some equations However the models can be quite fruitful in engineering problems and the existing computing algorithms are sufficiently powerful to calculate these estimators Therefore the properties of estimators can be interesting too      [An Estimation Problem with Poisson Processes](#) STANFORD UNIV CA DEPT OF STATISTICS, Alan E. Gelfand, 1982 This paper considers an estimation problem involving  $n$  independent Poisson processes such that the  $i$ th process has intensity function  $\lambda_i(t)$  It is of interest to estimate  $\lambda_i(t)$  Two estimation procedures are developed one using the exact arrival times of observations the second using categorical arrival times of observations Two specific instances of  $\lambda_i(t)$  an exponential and a bilinear form are investigated further An example applying the methodology to the active life of a judicial opinion is described Author      *Introduction to the Statistics of Poisson Processes and Applications* Yury A. Kutoyants, 2023-09-04 This book covers an extensive class of models involving inhomogeneous Poisson processes and deals with their identification i.e. the solution of certain estimation or hypothesis testing problems based on the given dataset These processes are mathematically easy to handle and appear in numerous disciplines including astronomy biology ecology geology seismology medicine physics statistical mechanics economics image processing forestry telecommunications insurance and finance reliability queuing theory wireless networks and localisation of sources Beginning with the definitions and properties of some fundamental notions stochastic integral likelihood ratio limit theorems etc the book goes on to analyse a wide class of estimators for regular and singular statistical models Special attention is paid to problems of change point type and in particular cusp type change point models then the focus turns to the asymptotically efficient nonparametric estimation of the mean function the intensity function and of some functionals Traditional hypothesis testing including some goodness of fit tests is also discussed The theory is then applied to three classes of problems misspecification in regularity MiR corresponding to situations where the chosen change point model and that of the real data have different regularity optical communication with phase and frequency modulation of periodic intensity functions and localization of a radioactive Poisson
