Introduction to Computing and Algorithms Russell L. Shackelford,1999 Introduction to Computing and Algorithms prepares students for the world of computing by giving them a solid foundation in the study of computer science algorithms By taking an algorithm based approach to the subject this book helps readers grasp overall concepts rather than getting them bogged down with specific syntax details of a programming language that can become obsolete Students work with algorithms from the start and apply these ideas to real problems that computers can help solve The benefit of this approach is that students will understand the power of computers as problem solving tools learn to think like programmers and gain an appreciation of the computer science discipline Learner-Centered Design of Computing Education Mark Guzdial,2015-12-01 Computing education is in enormous demand Many students both children and adult are realizing that they will need programming in the future This book presents the argument that they are not all going to use programming in the same way and for the same purposes What do we mean when we talk about teaching everyone to program When we target a broad audience should we have the same goals as computer science education for professional software developers How do we design computing education that works for everyone This book proposes use of a learner centered design approach to create computing education for a broad audience It considers several reasons for teaching computing to everyone and how the different reasons lead to different choices about learning goals and teaching methods The book reviews the history of the idea that programming isn t just for the professional software developer It uses research studies on teaching computing in liberal arts programs to graphic designers to high school teachers in order to explore the idea that computer science for everyone requires us to re think how we teach and what we teach The conclusion describes how we might create computing education for everyone **Αναπτυξη Εφαρμογών Σε Προγραμματιστικό Περιβάλλον ,**
