Coast And Geodetic Survey, 2013-09 This historic book may have numerous typos and missing text Purchasers can usually download a free scanned copy of the original book without typos from the publisher Not indexed Not illustrated 1916 edition Excerpt standard datum for geodetic operations in Canada and Mexico it became a matter of international importance and consequently its designation was changed by the Survey in 1913 to that of the North American datum Plans are now under way for carrying the primary triangulation of the United States and Canada to the Yukon and the prediction is here made that eventually the 50 miles which separate Alaska from Siberia will be spanned and a junction be effected with the great systems of Asia Europe and Africa Then with the extension from Mexico through Central and South America the data will be available for a world datum and the final word will have been said in the geodetic work of the earth BASE LINE MEASUREMENTS Closely related to and forming an integral part of the triangulation executed by the Coast and Geodetic Survey is the measurement of the base lines for controlling the lengths in triangulation In this work the Survey has furnished much of

interest and of value to the geodesist Ever has it kept keenly before it the necessity for refined measurements and many valuable devices to accomplish this desired result have been added by members of the force BASE BARS The Duplex bars invented by Assistant William Eimbeck and constructed by E G Fischer are probably the best form of base bars ever devised and gave a very high degree of precision but they were soon replaced by the tape as a form of base apparatus The only bar used in the United States and probably in the world which gives entire satisfaction so far as accuracy is concerned is the iced bar designed by President R S Woodward of the Carnegie Institution when an assistant in the Survey Owing to the great cost per kilometer

For instance let an angle be measured and found to be 60 degrees and again let it be measured in two parts one being found to be 40 degrees and the other 20 degrees The proper adjusted value of the angle is not as might at first be supposed the mean of 60 and 60 which is 60 degrees but as will be seen in the next chapter it is 60 degrees a result which requires the correction of each observation by the same amount 83 The method of computing probable errors by formula 20 is that considered the best by all writers Nevertheless on account of the labor of forming the squares of the residuals a simpler and less accurate formula is often employed in which only the residuals themselves are

Geodesy Wolfgang Torge, 2011-05-12 The third edition of this well known textbook first published in 1980 has been completely revised in order to adequately reflect the drastic changes which occurred in the field of geodesy in the last twenty years Reference systems are now well established by space techniques which dominate positioning and gravity field determination Terrestrial techniques still play an important role at local and regional applications whereby remarkable progress has been made with respect to automatic data acquisition Evaluation methods are now three dimensional in principle and have to take the gravity field into account Geodetic control networks follow these developments with far reaching consequences for geodetic practice Finally the increased accuracy of geodetic products and high data rates have significantly increased the contributions of geodesy to geodynamics research thus strengthening the role of geodesy within the geosciences The present state of geodesy is illustrated by recent examples of instruments and results An extensive reference list supports further studies

Full Meridian of Glory Paul Murdin,2008-12-25 the text below needs editing and we must be careful not to say things about Dan Brown s book that could get Springer in legal trouble Dan Brown s novel The Da Vinci Code was first published in 2003 its sales have reached 40 million worldwide The book mixes a small spice of fact into a large dollop of fiction to create an entertaining novel of intrigue adventure romance danger and conspiracy which have been imaginatively worked together to cook up the successful bestseller Most interest in the book s origins has centred on the sensational religious aspects Dan Brown has written All of the art architecture secret rituals secret societies all of that is historical fact This gives an air of authenticity to the book Brown has however made up the religious doctrines or based them on questionable accounts by others The locations of the actions of The Da Vinci Code are not however made up The present book is the scientific story behind the scene of several of the book s actions that take place on the axis of France that passes through Paris The Paris Meridian is the name of this location It is the line running north south through the astronomical observatory in Paris One of the original intentions behind the founding of the Paris Observatory was to determine and measure this line The French government financed the Paris Academy of Sciences to do so in the seventeenth to nineteenth centuries It employed both astronomers people who study and measure the stars and geodesists people who study and measure the Earth This book is about what they did and why It is a true story behind Dan Brown s fiction This is the first English language presentation of this historical material It is attractively written and it features the story of the community of scientists who created the Paris Meridian They knew each other well some were members of the same families in one case of four generations Like scientists everywhere they collaborated and formed alliances they also split into warring factions and squabbled They travelled to foreign countries somehow transcending the national and political disputes as scientists do now their eyes fixed on ideas of accuracy truth and objective enduring values save where the reception given to their own work is concerned when some became blind to high ideals and descended into petty politics To establish the Paris Meridian the scientists endured hardship survived danger and gloried in amazing adventures during a time of turmoil in Europe the French Revolution and the Napoleonic War between France and Spain Some were accused of witchcraft Some of their associates lost their heads on the guillotine Some died of disease Some won honour and fame One became the Head of State

in France albeit for no more than a few weeks Some found dangerous love in foreign countries One scientist killed in self defence when attacked by a jealous lover another was himself killed by a jealous lover a third brought back a woman to France and then jilted her whereupon she joined a convent The scientists worked on practical problems of interest to the government and to the people They also worked on one of the important intellectual problems of the time a problem of great interest to their fellow scientists all over the world nothing less than the theory of universal gravitation They succeeded in their intellectual work while touching politics and the affairs of state Their endeavours have left their marks on the landscape in art and in literature *Fundamentals of Cartography* R.
