2. See Data Table.
3. See Data Table. Sample Calculation for Pluto: $e = 4/16 = 0.25$
4. See Data Table.
5. Both foci are at the center.
6. It is very close to being a circle.
7. The comet. It looks more flattened out than the other orbits.

Conclude and Apply

1. Yes, the planets and comet travel in elliptical orbits.
2. Since the eccentricity of Earth is so small, Kepler might not have concluded that planets have elliptical orbits.
3. It travels fastest at perihelion. According to Kepler's second law, equal areas are swept out in equal time. Since there is less area available at perihelion, the planet must move faster.

$$4. \frac{v_P}{v_A} = \frac{A}{P} = \frac{10.0}{6.0} = \frac{1.7}{1}$$

5. $v_A =$ minimum velocity
 $= 3.7 \text{ km/s}$
 $v_P = 1.7 \times v_A$
 $= 1.7 \times 3.7 \text{ km/s}$
 $= 6.3 \text{ km/s}$

Going Further

1. Collect data using dates of location of a planet. Use areas and dates to confirm the second law.
2. In order to show the third law, a computer model would have a planet actually moving so that periods and distances could be measured.

Real-World Physics

Students can research elliptical orbits of satellites. Encourage the students to pick one or two satellites and, if possible, plot orbit data to determine the path that each satellite takes.

erroneously views but also dangerously treats the economy as a machine the market as an automaton and its agents as robots Inspired by heterodox economic and leading cognitive thinkers this book offers an alternative paradigm Central to MMH s psychophysical worldview is the fact that consumers investors and other participants are conscious beings and that their minds extension makes consciousness a reality in markets exemplified by market mood Specifically denial of the complex mind matter exchanges as the essence of markets means the extended mind body problem is economics elephant in the room The book argues that if mechanical economics is the answer we have been asking the wrong questions Moreover we will not solve our economic predicaments by doubling down on the assumption of rationality nor by identifying yet another behavioural bias Instead scholars and students of economics and finance as well as finance practitioners need to investigate through cognitive economics the deep links between markets and minds to better understand both With a foreword by investment strategist Russell Napier an intermezzo by neuroscientist and complexity pioneer Scott Kelso and an afterword by 4E cognition philosopher Julian Kiverstein **Scientific American** ,1904
