### Abstract

*This study is a descriptive-correlational research aimed to determine the significant relationship between Emotional Quotient, Adversity Quotient® and the Academic Performance of Student-Parents. Chi Square Test was utilized to test the significant relationship among variables. A purposive sampling was employed since there are only thirty (30) identified student-parents enrolled in the university. The General Weighted Average (GWA) during the second semester of AY 2016-2017 of the respondents was used to determine their academic performance. Based on the findings of the study, majority of the student-parents is at their late 20's and early 30's, female, Education students, in their lower year, and has 1 – 2 children. These results suggest that the student-parents are in their matured ages since almost all of them are returnees. The respondents reported that they have a high level of emotional quotient. Therefore, the study revealed that there is no significant relationship among student-parents' emotional quotient,*
