Learning From Data A Short Course Yaser S Abu Mostafa:

Learning from Data Yaser S. Abu-Mostafa,Malik Magdon-Ismail,Hsuan-Tien Lin,2012-01-01 **Data Intensive Computing Applications for Big Data** Mamta Mittal,Valentina Emilia Balas,D. Jude Hemanth,Raghvendra Kumar,2018-01-15 The book Data Intensive Computing Applications for Big Data discusses the technical concepts of big data data intensive computing through machine learning soft computing and parallel computing paradigms It brings together researchers to report their latest results or progress in the development of the above mentioned areas Since there are few books on this specific subject the editors aim to provide a common platform for researchers working in this area to exhibit their novel findings The book is intended as a reference work for advanced undergraduates and graduate students as well as multidisciplinary interdisciplinary and transdisciplinary research workers and scientists on the subjects of big data and cloud parallel and distributed computing and explains didactically many of the core concepts of these approaches for practical applications It is organized into 24 chapters providing a comprehensive overview of big data analysis using parallel computing and addresses the complete data science workflow in the cloud as well as dealing with privacy issues and the challenges faced in a data intensive cloud computing environment The book explores both fundamental and high level concepts and will serve as a manual for those in the industry while also helping beginners to understand the basic and advanced aspects of big data and cloud computing Knowledge and Power George Gilder,2013-06-10 Ronald Reagan s most quoted living author George Gilder is back with an all new paradigm shifting theory of capitalism that will upturn conventional wisdom just when our economy desperately needs a new direction America s struggling economy needs a better philosophy than the college student s lament I can t be out of money I still have checks in my checkbook We ve tried a government spending spree and we ve learned it doesn t work Now is the time to rededicate our country to the pursuit of free market capitalism before we re buried under a mound of debt and unfunded entitlements But how do we navigate between government spending that s too big to sustain and financial institutions that are too big to fail In Knowledge and Power George Gilder proposes a bold new theory on how capitalism produces wealth and how our economy can regain its vitality and its growth Gilder breaks away from the supply side model of economics to present a new economic paradigm the epic conflict between the knowledge of entrepreneurs on one side and the blunt power of government on the other The knowledge of entrepreneurs and their freedom to share and use that knowledge are the sparks that light up the economy and set its gears in motion The power of government to regulate stifle manipulate subsidize or suppress knowledge and ideas is the inertia that slows those gears down or keeps them from turning at all One of the twentieth century s defining economic minds has returned with a new philosophy to carry us into the twenty first Knowledge and Power is a must read for fiscal conservatives business owners CEOs investors and anyone interested in propelling America s economy to future success

Life After Google George Gilder,2018-07-17 A FINANCIAL TIMES BOOK OF THE MONTH FROM THE WALL STREET

JOURNAL Nothing Mr Gilder says or writes is ever delivered at anything less than the fullest philosophical decibel Mr Gilder sounds less like a tech guru than a poet and his words tumble out in a romantic cascade Google s algorithms assume the world s future is nothing more than the next moment in a random process George Gilder shows how deep this assumption goes what motivates people to make it and why it s wrong the future depends on human action Peter Thiel founder of PayPal and Palantir Technologies and author of Zero to One Notes on Startups or How to Build the Future The Age of Google built on big data and machine intelligence has been an awesome era But it s coming to an end In Life after Google George Gilder the peerless visionary of technology and culture explains why Silicon Valley is suffering a nervous breakdown and what to expect as the post Google age dawns Google s astonishing ability to search and sort attracts the entire world to its search engine and countless other goodies videos maps email calendars And everything it offers is free or so it seems Instead of paying directly users submit to advertising The system of aggregate and advertise works for a while if you control an empire of data centers but a market without prices strangles entrepreneurship and turns the Internet into a wasteland of ads The crisis is not just economic Even as advances in artificial intelligence induce delusions of omnipotence and transcendence Silicon Valley has pretty much given up on security The Internet firewalls supposedly protecting all those passwords and personal information have proved hopelessly permeable The crisis cannot be solved within the current computer and network architecture The future lies with the cryptocosm the new architecture of the blockchain and its derivatives Enabling cryptocurrencies such as bitcoin and ether NEO and Hashgraph it will provide the Internet a secure global payments system ending the aggregate and advertise Age of Google Silicon Valley long dominated by a few giants faces a great unbundling which will disperse computer power and commerce and transform the economy and the Internet Life after Google is almost here For fans of Wealth and Poverty Knowledge and Power and The Scandal of Money *Hands-On Machine Learning with Scikit-Learn, Keras, and TensorFlow* Aurélien Géron,2019-09-05 Through a series of recent breakthroughs deep learning has boosted the entire field of machine learning Now even programmers who know close to nothing about this technology can use simple efficient tools to implement programs capable of learning from data This practical book shows you how By using concrete examples minimal theory and two production ready Python frameworks Scikit Learn and TensorFlow author Aur lien G ron helps you gain an intuitive understanding of the concepts and tools for building intelligent systems You ll learn a range of techniques starting with simple linear regression and progressing to deep neural networks With exercises in each chapter to help you apply what you ve learned all you need is programming experience to get started Explore the machine learning landscape particularly neural nets Use Scikit Learn to track an example machine learning project end to end Explore several training models including support vector machines decision trees random forests and ensemble methods Use the TensorFlow library to build and train neural nets Dive into neural net architectures including convolutional nets recurrent nets and deep reinforcement learning Learn techniques for training and scaling deep neural nets **Hands-On Machine**

Learning with Scikit-Learn and PyTorch Aurélien Géron,2025-10-22 The potential of machine learning today is extraordinary yet many aspiring developers and tech professionals find themselves daunted by its complexity Whether you re looking to enhance your skill set and apply machine learning to real world projects or are simply curious about how AI systems function this book is your jumping off place With an approachable yet deeply informative style author Aur lien G ron delivers the ultimate introductory guide to machine learning and deep learning Drawing on the Hugging Face ecosystem with a focus on clear explanations and real world examples the book takes you through cutting edge tools like Scikit Learn and PyTorch from basic regression techniques to advanced neural networks Whether you re a student professional or hobbyist you ll gain the skills to build intelligent systems Understand ML basics including concepts like overfitting and hyperparameter tuning Complete an end to end ML project using scikit Learn covering everything from data exploration to model evaluation Learn techniques for unsupervised learning such as clustering and anomaly detection Build advanced architectures like transformers and diffusion models with PyTorch Harness the power of pretrained models including LLMs and learn to fine tune them Train autonomous agents using reinforcement learning *Business and Consumer Analytics: New Ideas* Pablo Moscato,Natalie Jane de Vries,2019-05-30 This two volume handbook presents a collection of novel methodologies with applications and illustrative examples in the areas of data driven computational social sciences Throughout this handbook the focus is kept specifically on business and consumer oriented applications with interesting sections ranging from clustering and network analysis meta analytics memetic algorithms machine learning recommender systems methodologies parallel pattern mining and data mining to specific applications in market segmentation travel fashion or entertainment analytics A must read for anyone in data analytics marketing behavior modelling and computational social science interested in the latest applications of new computer science methodologies The chapters are contributed by leading experts in the associated fields The chapters cover technical aspects at different levels some of which are introductory and could be used for teaching Some chapters aim at building a commonunderstanding of the methodologies and recent application areas including the introduction of new theoretical results in the complexity of core problems Business and marketing professionals may use the book to familiarize themselves with some important foundations of data science The work is a good starting point to establish an open dialogue of communication between professionals and researchers from different fields Together the two volumes present a number of different new directions in Business and Customer Analytics with an emphasis in personalization of services the development of new mathematical models and new algorithms heuristics and metaheuristics applied to the challenging problems in the field Sections of the book have introductory material to more specific and advanced themes in some of the chapters allowing the volumes to be used as an advanced textbook Clustering Proximity Graphs Pattern Mining Frequent Itemset Mining Feature Engineering Network and Community Detection Network based Recommending Systems and Visualization are some of the topics in the first volume Techniques on Memetic

Algorithms and their applications to Business Analytics and Data Science are surveyed in the second volume applications in Team Orienteering Competitive Facility location and Visualization of Products and Consumers are also discussed The second volume also includes an introduction to Meta Analytics and to the application areas of Fashion and Travel Analytics Overall the two volume set helps to describe some fundamentals acts as a bridge between different disciplines and presents important results in a rapidly moving field combining powerful optimization techniques allied to new mathematical models critical for personalization of services Academics and professionals working in the area of business anyalytics data science operations research and marketing will find this handbook valuable as a reference Students studying these fields will find this handbook useful and helpful as a secondary textbook **AI Magazine** ,1999 Report New York University.
