

Foundation Engineering

- Structural Foundations are the substructure elements which transmit the structural load to the earth in such a way, that the supporting soil is not over-stressed and not undergo deformations that would cause excessive settlement of the structure.
- Hence the properties of the supporting soil must be expected to affect the choice of type of structural foundation suitable for the structure.
- The failure of foundation will be due to
 - (i) settlement of soil / foundation.
(It is called as settlement failure)
 - (ii) sliding / slipping of soil / foundation.
(It is called as shear failure)
- The foundation should be safe in shear criteria and settlement criteria.

Sustainable Materials and Technologies under Climate Change Scenario Hanuman Devidas Chalak,Ashwani Jain,Praveen Aggarwal,2026-01-01 This book encompasses economic social and environmental dimensions aiming for a balance that ensures the well being of both people and the planet over the long term Sustainability and environmental protection are crucial topics in today s world Sustainability refers to the ability to meet the needs of the present without compromising the ability of future generations to meet their own needs Addressing these issues requires collaboration innovation and a commitment to change at all levels of society By prioritizing sustainability and environmental protection we can work toward a healthier more equitable and more resilient future for all Sustainability of a system is its ability to survive and retain its functionality over time For an engineered system to be sustainable it should be efficient reliable resilient and adaptive Thus the objective of sustainable engineering is to ensure the integration of an engineered system into the natural and man made environment without compromising the functionality of either the engineered system or that of the ecosystem and society and this harmony between the natural and built environments must be maintained at the local regional and global scales Therefore in the engineering domain sustainability can be looked upon as a dynamic equilibrium between four E s engineering design economy environment and equity As climate change and resource scarcity continue to pose major challenges there is an urgent need for more sustainable solutions in construction industry In response to these challenges the construction industry is actively exploring and implementing more sustainable practices and materials This shift aims to reduce the environmental impact of material production extend the service life of structures and minimize resource consumption Researchers industry
