5. Why does he use KOH (potassium hydroxide)?
 - KOH is used to solidify CO₂ produced by a respiring organism.
6. What are the three different vials/jars and what is the purpose of tube with glass beads?
 - The three different vials/jars are the peas, dry peas and glass beads. Glass beads used to subtract our values to account for fluctuations in the temperature and how that effects it.
7. Peas will start to consume **oxygen** and produce **carbon dioxide**. But the carbon dioxide will bind with the KOH and precipitate out as a solid. Therefore the volume of gas in the vial decreases as oxygen is consumed. As the volume drops, water moves where? **The water pressure is going to start to move this bubble further.**
8. Temperature fluctuations will have a huge influence on this because it effects gas volume, this is why you have a flask of **germinating peas, dry peas and worms**
9. How do you calculate the "rate" of respiration?
 - We use person's data

Cracking the AP Biology, 2002-2003 Edition Kim Magloire, 2002 The Princeton Review realizes that acing the AP Biology exam is very different from getting straight As in school. The Princeton Review doesn't try to teach students everything there is to know about biology; only the techniques they'll need to score higher on the exam. There's a big difference. In *Cracking the AP Biology*, TPR will teach test takers how to think like the test makers and eliminate answer choices that look right but are planted to fool test takers. Improve scores by knowing in advance what biology topics are most likely to be tested. Memorize complicated biology concepts using simple techniques. Use the three pass system to get the most out of the test time. Ace the essay section by practicing on TPR's sample essay questions. This book includes 2 full-length simulated AP Biology exams. All of The Princeton Review practice test questions are like the ones test takers will see on the actual exam, and every solution is fully explained.
