

Experiment - 5 Section B

Aim: To determine the angles of minimum deviation for a given glass prism by plotting a graph between the angles of incidence & angle of deviation.

Apparatus: Glass prism, drawing board, pins, drawing pins, white paper sheet, meter scale & protector.

Theory and Formula Used:

The refractive index of the material of the prism is given by

$$\mu = \frac{\sin \left(\frac{A + \delta_{\min}}{2} \right)}{\sin A/2}$$

Procedure: As performed in physics lab.

Calculations:
$$\mu = \frac{\sin \left(\frac{A + \delta_{\min}}{2} \right)}{\sin A/2}$$

Excerpt from *A Text Book of Practical Physics* The following pages are intended to serve as a book of reference to the student working in a physical laboratory The experiments described are not intended for a beginner but are suited for a student who has already spent a little time in the laboratory and worked through a more elementary course of experiments such as those described in the author's *Elementary Practical Physics* It is not intended or expected that any one class will work through all the experiments described in this book but that the teacher will select those which he considers most suitable being guided by the requirements of his pupils and the resources of his laboratory It is however hoped that teachers and students will find that all the experiments which can be performed with advantage in a laboratory having the ordinary equipment are described About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

Laboratory Projects in Physics Frederick Foreman Good,2015-06-26 Excerpt from *Laboratory Projects in Physics A Manual of Practical Experiments for Beginners* These experiments have been organized for the purpose of giving concrete expression in the field of physics to the recent tendencies in the teaching of science with respect to aim subject matter and method The physics course in a modern high school should be organized according to the recognized function of education in a democratic society It should include units of study which the masses of boys and girls of high school age are able to pursue with profit It should proceed toward an organization of practical situations activities and phenomena the value of which will be recognized and approved by teachers students parents administrators of education and others who are responsible for the work which boys and girls do in the high school It is intended that these experiments should form part of a physics course which includes class discussions and demonstrations They were devised and used for several years in a beginners course in practical physics They differ from the conventional physics laboratory experiments in that they deal more directly with the mechanisms and appliances of everyday experience The materials and procedure have been worked out in detail in order to aid the busy science teacher in the laborious task of placing practical laboratory study upon a workable basis A large list of projects and problems is offered In a year s course of thirty six to forty weeks perhaps not more than half
