Detail This book begins by introducing the most commonly used Elasticsearch server functionalities from creating your own index structure through querying faceting and aggregations and ends with cluster monitoring and problem diagnosis As you progress through the book you will cover topics such as starting Elasticsearch creating a new index and designing its proper structure After that you ll read about the query API that Elasticsearch exposes as well as about filtering capabilities aggregations and faceting Last but not least you will get to know how to find similar documents by using similar functionalities and how to implement application alerts by using the prospective search functionality called percolator Some advanced topics such as shard allocation control gateway configuration and how to use the discovery module will also be discussed This book will also show you the possibilities of cluster state and health monitoring as well as how to use third party tools

What You Will Learn

- Configure and create your own index
- Set up an analysis chain and handle multilingual data
- Use the Elasticsearch query DSL to make all kinds of queries
- Utilize filters efficiently and ensure they do not affect performance
- Implement autocomplete functionality
- Employ faceting the aggregations framework and similar functionalities to get more from your search and improve your clients search experience
- Monitor your cluster state and health by using Elasticsearch APIs as well as third party monitoring solutions
- Learn what gateway and discovery modules are and how to properly configure them
- Control primary shards and replica rebalancing
