Creating Accessible Online Instruction Using Universal Design Principles Brady Lund, 2020-09-28 What is accessibility Who needs it Often accessibility is defined narrowly with emphasis on physical limitations Accessibility needs however come in many forms from vision and hearing impairment to developmental disorders like Autism to psychiatric conditions like anxiety depression ADHD and PTSD Unfortunately accessibility does not come with a simple set of checkboxes It is a philosophy and practice that embraces social physical and informational elements Universal design does not come in the form of a quick and easy guide It is a philosophy To implement it completely requires more than just screen readers and video captions Creating Accessible Online Instruction Using Universal Design Principles introduces the need for accessibility in online education and library services and the framework of universal design for learning It takes a scoping rather than a purely technical approach It will help you not only o create accessible content but with how to communicate with students in an accessible manner This LITA Guide covers accessibility law Universal Design for Learning and Web Content Accessibility guidelines and communication and educational research and theory The content is interspersed with practical examples and case studies

Structural Theory of Automata, Semigroups, and Universal Algebra Valery B. Kudryavtsev, Ivo G. Rosenberg, 2006-01-18 Several of the contributions to this volume bring forward many mutually beneficial interactions and connections between the three domains of the title Developing them was the main purpose of the NATO ASI summerschool held in Montreal in 2003 Although some connections for example between semigroups and automata were known for a long time developing them and surveying them in one volume is novel and hopefully stimulating for the future Another aspect is the emphasis on the structural theory of automata that studies ways to construct big automata from small ones The volume also has contributions on top current research or surveys in the three domains One contribution even links clones of universal algebra with the computational complexity of computer science Three contributions introduce the reader to research in the former East block

Universal Artificial Intelligence Marcus Hutter, 2005-12-29 Personal motivation The dream of creating artificial devices that reach or outperform human intelligence is an old one It is also one of the dreams of my youth which have never left me What makes this challenge so interesting A solution would have enormous implications on our society and there are reasons to believe that the AI problem can be solved in my expected lifetime So it s worth sticking to it for a lifetime even if it takes 30 years or so to reap the benefits The AI problem The science of artificial intelligence AI may be defined as the construction of intelligent systems and their analysis A

natural definition of a system is anything that has an input and an output stream Intelligence is more complicated It can have many faces like creativity solving problems pattern recognition classification learning induction deduction building analogies optimization surviving in an environment language processing and knowledge A formal definition incorporating every aspect of intelligence however seems difficult Most if not all known facets of intelligence can be formulated as goal driven or more precisely as maximizing some utility function It is therefore sufficient to study goal driven AI e.g. the biological goal of animals and humans is to survive and spread The goal of AI systems should be to be useful to humans

Institution-independent Model Theory Răzvan Diaconescu, 2025-03-05 A model theory that is independent of any concrete logical system allows a general handling of a large variety of logics This generality can be achieved by applying the theory of institutions that provides a precise general mathematical formulation for the intuitive concept of a logical system Especially in computer science where the development of a huge number of specification logics is observable institution independent model theory simplifies and sometimes even enables a concise model theoretic analysis of the system Besides incorporating important methods and concepts from conventional model theory the proposed axiomatic top down methodology allows for a structurally clean understanding of model theoretic phenomena Consequently results from conventional concrete model theory can be understood more easily and sometimes even new results are obtained Moreover all this is also applied to non classical model theories This second edition introduces some novelties in the presentation style which aim to enhance the readability of the material and the proofs Additional chapters have also been added
