
BYU Physics 121 Chapter 7 Conceptual Questions and answers 100% correct 2025

A farmhand carrying a 5 kg bucket of milk dashes 5 meters across a barnyard at a constant speed of 4 m/s. How much work was done on the bucket in that process? - correct answer ✓ There is no change in kinetic energy, so there is no work done on the bucket. The gravitational force is perpendicular to the displacement.

A book is moving to the right across a table at constant speed. There are four forces acting on it, its weight, W , which is straight down, the normal force of the table, N , which is straight up, and two applied forces, one, called F_1 , pointing 60° to the right of vertical and the other, F_2 , pointing 60° to the left of vertical. List each of these forces in the order of increasing work, i.e. first list the force which does the least work, then the second most, until you reach the one that does the most work. Two forces that do equal work should have an equal sign between them. Note that we are asking for the ranking to be done by the amount of work, not by the magnitude of the amount of work. - correct answer ✓ $F_2 < W = N < F_1$

A ball is falling through the air. It has just two forces acting on it, its weight and air resistance. Which of the following statements is true? - correct answer ✓ There are both conservative and nonconservative forces acting on the ball.

All of the following statements are true except one. Which one is false? - correct answer ✓ a. Work done by a conservative force only depends on the initial and final states.

b. One can never associate a potential energy function with a conservative force.

c. An example of a nonconservative force is friction.
