The University of Learning John Bowden, Ference Marton, 2003-12-18 Universities are rarely structured to facilitate learning and when they are it is often done so in a limited way This book looks at the theory and practice of learning and how universities can improve their quality and competence It tackles the past failure of the quality and competence movements and advocates a move towards Universities of Learning The authors advocate an integration of elements that are often dealt with separately theory and practice teaching and research and the levels of institution and individual and handle these dimensions of integration in conjunction with each other This new paperback edition will be essential reading for all those who are concerned with improving learning in higher education It includes an updated preface that takes account of developments since the publication of the hardback edition

Developmental Psychology C.-A. Hauert, 1990-01-19 Since the end of the sixties Piagetian general theory with its inherent power of unification has gradually given way to a multitude of more specific models which is in evidence today In this volume the authors concentrate on three perspectives namely cognitive perceptuo motor and neuropsychological development and attempt to coordinate these traditionally separated views Good illustrations of these theoretical connections can be found in different chapters although the persistent isolation of these three domains still remains However the authors believe efforts in developmental psychology must continue in the direction of domain interaction for theoretical concepts as well as methodological tools
