Keogh, Eugene O' Brien, 2005-08-09 The definitive text in the field of Bridge Deck behaviour and analysis Bridge Deck Analysis is an essential reference for civil and structural engineers It provides bridge designers with the knowledge to understand the behaviour of bridge decks to be familiar with and to understand the various numerical modelling techniques to know which technique is most suited The book covers the grillage analogy dedicates a chapter to the modelling and analysis of integral bridge forms and also provides guidance of the application of the finite element method

Advances in Engineering Materials, Structures and Systems: Innovations, Mechanics and Applications Alphonse Zingoni, 2019-08-21 Advances in Engineering Materials Structures and Systems Innovations Mechanics and Applications comprises 411 papers that were presented at SEMC 2019 the Seventh International Conference on Structural Engineering Mechanics and Computation held in Cape Town South Africa from 2 to 4 September 2019 The subject matter reflects the broad scope of SEMC conferences and covers a wide variety of engineering materials both traditional and innovative and many types of structures The many topics featured in these Proceedings can be classified into six broad categories that deal with i the mechanics of materials and fluids elasticity plasticity flow through porous media fluid dynamics fracture fatigue damage delamination corrosion bond creep shrinkage etc ii the mechanics of structures and systems structural dynamics vibration seismic response soil structure interaction fluid structure interaction

response to blast and impact response to fire structural stability buckling collapse behaviour iii the numerical modelling and experimental testing of materials and structures numerical methods simulation techniques multi scale modelling computational modelling laboratory testing field testing experimental measurements iv innovations and special structures nanostructures adaptive structures smart structures composite structures bio inspired structures shell structures membranes space structures lightweight structures long span structures tall buildings wind turbines etc v design in traditional engineering materials steel concrete steel concrete composite aluminium masonry timber glass vi the process of structural engineering conceptualisation planning analysis design optimization construction assembly manufacture testing maintenance monitoring assessment repair strengthening retrofitting decommissioning The SEMC 2019 Proceedings will be of interest to civil structural mechanical marine and aerospace engineers Researchers developers practitioners and academics in these disciplines will find them useful Two versions of the papers are available Short versions intended to be concise but self contained summaries of the full papers are in this printed book The full versions of the papers are in the e book

multiplying the corresponding moment by an empirically derived distribution factor In a previous study conducted by Mabsoul et al 1996 a typical one span two lane composite steel girder bridge was analyzed using the finite element method Four finite element meshes were tested of which two were selected for further analyses A parametric study was performed for a wide variety of span lengths and girder spacings which were thought to primarily affect the wheel load distribution Tarhini et al 1992 This study which served to assess current design procedures AASHTO 1992 and 1994 was limited to single span two lane bridges only In the proposed research the finite element analysis is extended to simple and continuous multi lane steel girder bridges The analysis will consider simple one span and two span bridges with two three and four lanes This study will focus on the determination of the lateral wheel load distribution factor on the girders Typical steel girder bridges will be discretized and analyzed by the finite element method for a variety of span lengths and girder spacings Bridges will be loaded by AASHTO design trucks The position of the truck will be varied along both the longitudinal and lateral directions to produce maximum positive and negative moments in the girders The finite element structural program SAP90 1992 will be used The proposed research will present a comprehensive study of straight steel girder bridges It will therefore assist structural engineers in the analysis of simple and continuous multi lane bridges The finite element analysis will present an accurate approach for the evaluation of the load carrying capacity of existing or new bridges and will serve to assess approximate methods currently used in bridge design practice
