Padwick's Bibliography of Cricket, 1991 **Vijay** Vijay Thariani, 2021-07-28 This is Vijay's life journey narrated with honesty, emotion and with gratitude towards the events and people that shaped his life. It is as much a passage of self-discovery as it is a narration of his experiences, his adolescence and formative adult years, his professional accomplishments and his family. This book is Vijay's effort to share his thoughts on things all of us think about every day: the joys of youth, our dreams before life consumes us, the ups and downs of our career and the hard work required to achieve something truly worthwhile. Vijay deliberates on the importance of keeping promises, living life with integrity and having the conviction to stand up to principles. The author hopes that the reader will find parallels in this book they can relate to, seek solace in and learn from. Vijay continues to be amazed at the never-ending opportunities life throws up for new beginnings and wishes you dear reader luck with your voyages.

AI vs Humans Michael W. Eysenck, Christine Eysenck, 2021-12-30 The great majority of books on artificial intelligence are written by AI experts who understandably focus on its achievements and potential transformative effects on society. In contrast, **AI vs Humans** is written by two psychologists, Michael and Christine Eysenck, whose perspective on AI, including robotics, is based on their knowledge and understanding of human cognition. This book evaluates the strengths and limitations of people and AI. The authors' expertise equips them well to consider this by seeing how well or badly AI compares to human intelligence. They accept that AI matches or exceeds human ability in many spheres such as mathematical calculations, complex games (e.g. chess, Go) and poker, diagnosis from medical images and robotic surgery. However, the human tendency to anthropomorphise has led many people to claim mistakenly that AI systems can think, infer, reason and understand while engaging in information processing. In fact, such systems lack all those cognitive skills and are also deficient in the quintessentially human abilities of flexibility of thinking and general intelligence. At a time when human commitment to AI appears unstoppable, this up-to-date book advocates a symbiotic and co-operative relationship between humans and AI. It will be essential reading for anyone interested in AI and human cognition.
