**On different concepts for the linearization of matrix polynomials and canonical decompositions of structured matrices with respect to indefinite sesquilinear forms** Philip Saltenberger, 2019-05-30 In this thesis a novel framework for the construction and analysis of strong linearizations for matrix polynomials is presented Strong linearizations provide the standard means to transform polynomial eigenvalue problems into equivalent generalized eigenvalue problems while preserving the complete finite and infinite eigenstructure of the problem After the transformation the QZ algorithm or special methods appropriate for structured linearizations can be applied for finding the eigenvalues efficiently The block Kronecker ansatz spaces proposed here establish an innovative and flexible approach for the construction of strong linearizations in the class of strong block minimal bases pencils Moreover they represent a new vector space setting for linearizations of matrix polynomials that additionally provides a common basis for various existing techniques on this task such as Fiedler linearizations New insights on their relations similarities and differences are revealed The generalized eigenvalue problems obtained often allow for an efficient numerical solution This is discussed with special attention to structured polynomial eigenvalue problems whose linearizations are structured as well Structured generalized eigenvalue problems may also lead to equivalent structured standard eigenvalue problems Thereby the transformation produces matrices that can often be regarded as selfadjoint or skewadjoint with respect to some indefinite inner product Based on this observation normal matrices in indefinite inner product spaces and their spectral properties are studied and analyzed Multiplicative and additive canonical decompositions respecting the matrix structure induced by the inner product are established

*Matrices and Linear Algebra* Hans Schneider, George Phillip Barker, 1989-01-01 Linear algebra is one of the central disciplines in mathematics A student of pure mathematics must know linear algebra if he is to continue with modern algebra or functional analysis Much of the mathematics now taught to engineers and physicists requires it This well known and highly regarded text makes the subject accessible to undergraduates with little mathematical experience Written mainly for students in physics engineering economics and other fields outside mathematics the book gives the theory of matrices and applications to systems of linear equations as well as many related topics such as determinants eigenvalues and differential equations Table of Contents 1 The Algebra of Matrices 2 Linear Equations 3 Vector Spaces 4 Determinants 5 Linear Transformations 6 Eigenvalues and Eigenvectors 7 Inner Product Spaces 8 Applications to Differential Equations For the second edition the authors added several exercises in each chapter and a brand new section in Chapter 7 The exercises which are both true false and multiple choice will enable the student to test his grasp of the definitions and theorems in the chapter The new section in Chapter 7 illustrates the geometric content of Sylvester s Theorem by means of conic sections and quadric surfaces 6 line drawings Index Two prefaces Answer section

**LINEAR ALGEBRA** KUMARESAN, S., 2000-01-01 This clear concise and highly readable text is designed for a first course in linear algebra and is intended for undergraduate courses in mathematics It focusses throughout on geometric explanations to make the student perceive that linear algebra is nothing but analytic geometry of  $n$  dimensions From the very start linear algebra is presented as an extension of the theory of simultaneous linear equations and their geometric interpretation is shown to be a recurring theme of the subject The integration of abstract algebraic concepts with the underlying geometric notions is one of the most distinguishing features of this book designed to help students in the pursuit of multivariable calculus and differential geometry in subsequent courses Explanations and concepts are logically presented in a conversational tone and well constructed writing style so that students at a variety of levels can understand the material and acquire a solid foundation in
