Kanta Prasad Sharma, Shaurya Gupta, Ashish Sharma, Dac-Nhuong Le, 2023-04-26 EVOLVING NETWORKING

TECHNOLOGIES This book discusses in a practical manner some of the critical security challenges facing the ever evolving networking technologies of today In an age of explosive worldwide growth of electronic data storage and communications effective protection of information has become a critical requirement especially when used in coordination with other tools for information security and cryptography in all of its applications including data confidentiality data integrity and user authentication While the importance of cryptographic technique i e encryption in protecting sensitive and critical information and resources cannot be overemphasized an examination of the technical evolution within several industries reveals an approaching precipice of scientific change The glacially paced but inevitable convergence of quantum mechanics nanotechnology computer science and applied mathematics will revolutionize modern technology The implications of such changes will be far reaching with one of its greatest impacts affecting information security and more specifically modern cryptography The book takes the reader through these issues As the security systems design becomes more and more complex to meet these challenges a mistake that is committed most often by security specialists is not making a comprehensive analysis of the system to be secured before choosing which security mechanism to deploy Often the security mechanism chosen turns out to be either incompatible with or inadequate for handling the complexities of the system In addition the book also discusses three main points Configuration management is a critical issue and as networks are increasing in size their configuration needs to be managed Devices may conflict with each other in terms of configuration Therefore it becomes challenging for firewalls to be up to date according to network policies Scalability of the network is another big challenge it would be easier to address if the network stays the same but the network is ever expanding with a constant increase in the number of devices devoted to the network Vendor lock in Business decisions that are taken today are revolving around the assumptions and capabilities of the current vendor and environment scenario Buying the best solutions from today s vendors involves how to interoperate integrate and support multiple solutions It may involve tearing out all of the longstanding kits without tearing down the entire network at the same time Audience This book specifically appeals to industry practitioners IT researchers and students regarding network technological management **Proceedings of 2nd**

Communication Systems Modeling and Simulation using MATLAB and Simulink K. C. Raveendranathan, 2011-09-07 This is probably the first book that employs the technique of simulation experiments as a means of reinforcing the basic concepts of communication theory Undergraduate students are generally exposed to a mathematically rigorous treatment of communications theory but seldom have the benefit of a practical orientated approach employing modelling and simulation for a thorough assimilation of the subject This book can supplement any standard textbook to cover this significant lacuna in the existing learning methodology It uses MATLAB the language of the technical computing fraternity for the purpose The introductory chapters provide an overview of computer simulation and MATLAB programming concepts Thereafter communications concepts are presented in the traditional manner but followed up with appropriate simulations in MATLAB Simulink Relevant MATLAB source code is given whenever it is used to illustrate a point All the source code given in the text has been tested on MATLAB kernel version 7 10 Release R2010a and is provided in the accompanying CD
