**Introduction To Algorithms** Thomas H Cormen, Charles E Leiserson, Ronald L Rivest, Clifford Stein, 2001 An extensively revised edition of a mathematically rigorous yet accessible introduction to algorithms

**Introduction to Algorithms, third edition** Thomas H. Cormen, Charles E. Leiserson, Ronald L. Rivest, Clifford Stein, 2009-07-31 The latest edition of the essential text and professional reference with substantial new material on such topics as vEB trees multithreaded algorithms dynamic programming and edge based flow Some books on algorithms are rigorous but incomplete others cover masses of material but lack rigor Introduction to Algorithms uniquely combines rigor and comprehensiveness The book covers a broad range of algorithms in depth yet makes their design and analysis accessible to all levels of readers Each chapter is relatively self contained and can be used as a unit of study The algorithms are described in English and in a pseudocode designed to be readable by anyone who has done a little programming The explanations have been kept elementary without sacrificing depth of coverage or mathematical rigor The first edition became a widely used text in universities worldwide as well as the standard reference for professionals The second edition featured new chapters on the role of algorithms probabilistic analysis and randomized algorithms and linear programming The third edition has been revised and updated throughout It includes two completely new chapters on van Emde Boas trees and multithreaded algorithms substantial additions to the chapter on recurrence now called Divide and Conquer and an appendix on matrices It features improved treatment of dynamic programming and greedy algorithms and a new notion of edge based flow in the material on flow networks Many exercises and problems have been added for this edition The international paperback edition is no longer available the hardcover is available worldwide

[Algorithm Design: A Methodological Approach - 150 problems and detailed solutions](#) Patrick Bosc, Marc Guyomard, Laurent Miclet, 2023-01-31 A bestseller in its French edition this book is original in its construction and its success in the French market demonstrates its appeal It is based on three principles 1 An organization of the chapters by families of algorithms exhaustive search divide and conquer etc On the contrary there is no chapter devoted only to a systematic exposure of say algorithms on strings Some of these will be found in different chapters 2 For each family of algorithms an introduction is given to the mathematical principles and the issues of a rigorous design with one or two pedagogical examples 3 For the most part the book details 150 problems spanning seven families of algorithms For each problem a precise and progressive statement is given More importantly a complete solution is detailed with respect to the design principles that have been presented often some classical errors are pointed out Roughly speaking two thirds of the book is devoted to the detailed rational construction of the solutions
