**Language Processing** Sunil Patel, 2021-01-13 Learn how to redesign NLP applications from scratch KEY FEATURES Get familiar with the basics of any Machine Learning or Deep Learning application Understand how does preprocessing work in NLP pipeline Use simple PyTorch snippets to create basic building blocks of the network commonly used in NLP Learn how to build a complex NLP application Get familiar with the advanced embedding technique Generative network and Audio signal processing techniques DESCRIPTION Natural language processing NLP is one of the areas where many Machine Learning and Deep Learning techniques are applied This book covers wide areas including the fundamentals of Machine Learning Understanding and optimizing Hyperparameters Convolution Neural Networks CNN and Recurrent Neural Networks RNN This book not only covers the classical concept of text processing but also shares the recent advancements This book will empower users in designing networks with the least computational and time complexity This book not only covers basics of Natural Language Processing but also helps in deciphering the logic behind advanced concepts architecture such as Batch Normalization Position Embedding DenseNet Attention Mechanism Highway Networks Transformer models and Siamese Networks This book also covers recent advancements such as ELMo BiLM SkipThought and Bert This book also covers practical implementation with step by step explanation of deep learning techniques in Topic Modelling Text Generation Named Entity Recognition Text Summarization and Language Translation In addition to this very advanced and open to research topics such as Generative Adversarial Network and Speech Processing are also covered WHAT YOU WILL LEARN Learn how to leveraging GPU for Deep Learning Learn how to use complex embedding models such as BERT Get familiar with the common NLP applications Learn how to use GANs in NLP Learn how to process Speech data and implementing it in Speech applications WHO THIS BOOK IS FOR This book is a must read to everyone who wishes to start the career with Machine learning and Deep Learning This book is also for those who want to use GPU for developing Deep Learning applications TABLE OF CONTENTS 1 Understanding the basics of learning Process 2 Text Processing Techniques 3 Representing Language Mathematically 4 Using RNN for NLP 5 Applying CNN In NLP Tasks 6 Accelerating NLP with Advanced Embeddings 7 Applying Deep Learning to NLP tasks 8 Application of Complex Architectures in NLP 9 Understanding Generative Networks 10 Techniques of Speech Processing 11 The Road Ahead **TensorFlow 2.0 Quick Start Guide** Tony Holdroyd, 2019-03-29 Perform supervised and unsupervised machine learning and learn advanced techniques such as training neural networks Key Features Train your own models for effective prediction using high level Keras API Perform supervised and unsupervised machine learning and learn advanced techniques such as training neural networks Get acquainted with some new practices introduced in TensorFlow 2.0 AlphaBook Description TensorFlow is one of the most popular machine learning frameworks in Python With this book you will improve your knowledge of some of the

latest TensorFlow features and will be able to perform supervised and unsupervised machine learning and also train neural networks After giving you an overview of what's new in TensorFlow 2.0 Alpha the book moves on to setting up your machine learning environment using the TensorFlow library You will perform popular supervised machine learning tasks using techniques such as linear regression logistic regression and clustering You will get familiar with unsupervised learning for autoencoder applications The book will also show you how to train effective neural networks using straightforward examples in a variety of different domains By the end of the book you will have been exposed to a large variety of machine learning and neural network TensorFlow techniques What you will learn Use tf Keras for fast prototyping building and training deep learning neural network models Easily convert your TensorFlow 1.12 applications to TensorFlow 2.0 compatible files Use TensorFlow to tackle traditional supervised and unsupervised machine learning applications Understand image recognition techniques using TensorFlow Perform neural style transfer for image hybridization using a neural network Code a recurrent neural network in TensorFlow to perform text style generation Who this book is for Data scientists machine learning developers and deep learning enthusiasts looking to quickly get started with TensorFlow 2 will find this book useful Some Python programming experience with version 3.6 or later along with a familiarity with Jupyter notebooks will be an added advantage Exposure to machine learning and neural network techniques would also be helpful

**AI and Machine Learning for Coders** Laurence Moroney, 2020-10-01 If you're looking to make a career move from programmer to AI specialist this is the ideal place to start Based on Laurence Moroney's extremely successful AI courses this introductory book provides a hands-on code-first approach to help you build confidence while you learn key topics You'll understand how to implement the most common scenarios in machine learning such as computer vision natural language processing NLP and sequence modeling for web mobile cloud and embedded runtimes Most books on machine learning begin with a daunting amount of advanced math This guide is built on practical lessons that let you work directly with the code You'll learn How to build models with TensorFlow using skills that employers desire The basics of machine learning by working with code samples How to implement computer vision including feature detection in images How to use NLP to tokenize and sequence words and sentences Methods for embedding models in Android and iOS How to serve models over the web and in the cloud with TensorFlow Serving

**Deep Learning for Beginners with TensorFlow** Mark Smart, 2018-09-13 This book is an exploration of deep learning in Python using TensorFlow The author guides you on how to create machine learning models using TensorFlow You will know the initial steps of getting started with TensorFlow in Python This involves installing TensorFlow and writing your first code TensorFlow works using the concept of graphs The author helps you know how expressions are represented into graphs in TensorFlow Deep learning in Python with TensorFlow simply involves the creation of neural network models The author helps you understand how to create neural network models with TensorFlow You are guided on how to train such models with data of various types Examples of such data include images and text The process of

loading your own data into TensorFlow for training neural network models has also been discussed You will also know how to use the inbuilt data for training your neural network models You will learn from this book Getting started Building a Neural Network Working with Images Importing Data Subjects include tensorflow python deep learning with python tensorflow machine learning tensor flow tensorflow deep learning cookbook tensorflow for deep learning tensorflow for dummies tensorflow books machine learning with tensorflow tensorflow c concept of graphs neural network neural networks python tensorflow with neural network [Mastering OpenCV 4 with Python](#) Alberto Fernández Villán,2019-03-29 Create advanced applications with Python and OpenCV exploring the potential of facial recognition machine learning deep learning web computing and augmented reality Key FeaturesDevelop your computer vision skills by mastering algorithms in Open Source Computer Vision 4 OpenCV 4 and PythonApply machine learning and deep learning techniques with TensorFlow and KerasDiscover the modern design patterns you should avoid when developing efficient computer vision applicationsBook Description OpenCV is considered to be one of the best open source computer vision and machine learning software libraries It helps developers build complete projects in relation to image processing motion detection or image segmentation among many others OpenCV for Python enables you to run computer vision algorithms smoothly in real time combining the best of the OpenCV C API and the Python language In this book you ll get started by setting up OpenCV and delving into the key concepts of computer vision You ll then proceed to study more advanced concepts and discover the full potential of OpenCV The book will also introduce you to the creation of advanced applications using Python and OpenCV enabling you to develop applications that include facial recognition target tracking or augmented reality Next you ll learn machine learning techniques and concepts understand how to apply them in real world examples and also explore their benefits including real time data production and faster data processing You ll also discover how to translate the functionality provided by OpenCV into optimized application code projects using Python bindings Toward the concluding chapters you ll explore the application of artificial intelligence and deep learning techniques using the popular Python libraries TensorFlow and Keras By the end of this book you ll be able to develop advanced computer vision applications to meet your customers demands What you will learnHandle files and images and explore various image processing techniquesExplore image transformations including translation resizing and croppingGain insights into building histogramsBrush up on contour detection filtering and drawingWork with Augmented Reality to build marker based and markerless applicationsWork with the main machine learning algorithms in OpenCVExplore the deep learning Python libraries and OpenCV deep learning capabilitiesCreate computer vision and deep learning web applicationsWho this book is for This book is designed for computer vision developers engineers and researchers who want to develop modern computer vision applications Basic experience of OpenCV and Python programming is a must [Getting Started with TensorFlow 2.0 for Deep Learning](#) Muhammad Javed,2019 Learn to develop deep learning models and kickstart your career in deep learning with TensorFlow 2 0 About This Video Explore the

latest feature set and modern deep learning APIs in TensorFlow 2.0. Develop computer vision and text sequences based on deep learning models. Learn advanced deep learning topics including Keras functional API. In Detail Deep learning is a trending technology if you want to break into cutting edge AI and solve real world data driven problems. Google's TensorFlow is a popular library for implementing deep learning algorithms because of its rapid developments and commercial deployments. This course provides you with the core of deep learning using TensorFlow 2.0. You'll learn to train your deep learning networks from scratch, preprocess and split your datasets, train deep learning models for real world applications and validate the accuracy of your models. By the end of the course you'll have a profound knowledge of how you can leverage TensorFlow 2.0 to build real world applications without much effort.

[Practical Big Data Analytics](#) Nataraj Dasgupta, 2018-01-15. Get command of your organizational Big Data using the power of data science and analytics. Key Features: A perfect companion to boost your Big Data storing, processing, analyzing skills to help you take informed business decisions. Work with the best tools such as Apache Hadoop, R, Python and Spark for NoSQL platforms to perform massive online analyses. Get expert tips on statistical inference, machine learning, mathematical modeling and data visualization for Big Data. Book Description: Big Data analytics relates to the strategies used by organizations to collect, organize and analyze large amounts of data to uncover valuable business insights that otherwise cannot be analyzed through traditional systems. Crafting an enterprise scale, cost efficient Big Data and machine learning solution to uncover insights and value from your organization's data is a challenge. Today with hundreds of new Big Data systems, machine learning packages and BI Tools, selecting the right combination of technologies is an even greater challenge. This book will help you do that. With the help of this guide, you will be able to bridge the gap between the theoretical world of technology with the practical ground reality of building corporate Big Data and data science platforms. You will get hands on exposure to Hadoop and Spark, build machine learning dashboards using R and R Shiny, create web based apps using NoSQL databases such as MongoDB and even learn how to write R code for neural networks. By the end of the book, you will have a very clear and concrete understanding of what Big Data analytics means, how it drives revenues for organizations and how you can develop your own Big Data analytics solution using different tools and methods articulated in this book. What you will learn: Get a 360 degree view into the world of Big Data, data science and machine learning. Broad range of technical and business Big Data analytics topics that caters to the interests of the technical experts as well as corporate IT executives. Get hands on experience with industry standard Big Data and machine learning tools such as Hadoop, Spark, MongoDB, KDB and R. Create production grade machine learning BI Dashboards using R and R Shiny with step by step instructions. Learn how to combine open source Big Data, machine learning and BI Tools to create low cost business analytics applications. Understand corporate strategies for successful Big Data and data science projects. Go beyond general purpose analytics to develop cutting edge Big Data applications using emerging technologies. Who this book is for: The book is intended for existing and aspiring Big Data

professionals who wish to become the go to person in their organization when it comes to Big Data architecture analytics and governance While no prior knowledge of Big Data or related technologies is assumed it will be helpful to have some programming experience **Fog Radio Access Networks (F-RAN)** Mugen Peng,Zhongyuan Zhao,Yaohua Sun,2020-08-12

This book provides a comprehensive introduction of Fog Radio Access Networks F RANs from both academic and industry perspectives The authors first introduce the network architecture and the frameworks of network management and resource allocation for F RANs They then discuss the recent academic research achievements of F RANs such as the analytical results of theoretical performance limits and optimization theory based resource allocation techniques Meanwhile they discuss the application and implementations of F RANs including the latest standardization procedure and the prototype and test bed design The book is concluded by summarizing the existing open issues and future trends of F RANs Includes the latest theoretical and technological research achievements of F RANs also discussing existing open issues and future trends of F RANs toward 6G from an interdisciplinary perspective Provides commonly used tools for research and development of F RANs such as open resource projects for implementing prototypes and test beds Includes examples of prototype and test bed design and gives tools to evaluate the performance of F RANs in simulations and experimental circumstances [Machine Learning and Deep Learning Using Python and TensorFlow](#) Venkata Reddy Konasani,Shailendra Kadre,2021-04-29

Understand the principles and practices of machine learning and deep learning This hands on guide lays out machine learning and deep learning techniques and technologies in a style that is approachable using just the basic math required Written by a pair of experts in the field Machine Learning and Deep Learning Using Python and TensorFlow contains case studies in several industries including banking insurance e commerce retail and healthcare The book shows how to utilize machine learning and deep learning functions in today s smart devices and apps You will get download links for datasets code and sample projects referred to in the text Coverage includes Machine learning and deep learning concepts Python programming and statistics fundamentals Regression and logistic regression Decision trees Model selection and cross validation Cluster analysis Random forests and boosting Artificial neural networks TensorFlow and Keras Deep learning hyperparameters Convolutional neural networks Recurrent neural networks and long short term memory **Getting Started with TensorFlow for Deep Learning** Tom Joy,2018 We will not only get you up and running with deep learning but also equip you with the skills to implement your own neural networks and apply them to the real world We will use TensorFlow an efficient Python library used to create and train our neural networks You ll learn the skills to implement their architecture quickly and efficiently without having to deal with minutiae You can rely on our expert guidance while learning the basic theory backed up with relevant examples We provide examples of neural networks which you can use to highlight the key features We then build up to more advanced networks You ll learn to utilize a Convolutional Neural Network to classify images of handwritten text and then take your CNN further to perform object detection and localization in an image

This course will quickly get you past the fundamentals of TensorFlow you'll go on to more exciting things such as implementing a variety of image recognition tasks

Resource description page **Getting Started with Tensorflow** Giancarlo Zaccone, 2016-07-26 Get up and running with the latest numerical computing library by Google and dive deeper into your data

About This Book Get the first book on the market that shows you the key aspects TensorFlow how it works and how to use it for the second generation of machine learning

Want to perform faster and more accurate computations in the field of data science This book will acquaint you with an all new refreshing library TensorFlow Dive into the next generation of numerical computing and get the most out of your data with this quick guide

Who This Book Is For This book is dedicated to all the machine learning and deep learning enthusiasts data scientists researchers and even students who want to perform more accurate fast machine learning operations with TensorFlow

Those with basic knowledge of programming Python and C C and math concepts who want to be introduced to the topics of machine learning will find this book useful

What You Will Learn

- Install and adopt TensorFlow in your Python environment to solve mathematical problems
- Get to know the basic machine and deep learning concepts
- Train and test neural networks to fit your data model
- Make predictions using regression algorithms
- Analyze your data with a clustering procedure
- Develop algorithms for clustering and data classification
- Use GPU computing to analyze big data

In Detail Google's TensorFlow engine after much fanfare has evolved in to a robust user friendly and customizable application grade software library of machine learning ML code for numerical computation and neural networks

This book takes you through the practical software implementation of various machine learning techniques with TensorFlow

In the first few chapters you'll gain familiarity with the framework and perform the mathematical operations required for data analysis

As you progress further you'll learn to implement various machine learning techniques such as classification clustering neural networks and deep learning through practical examples

By the end of this book you'll have gained hands on experience of using TensorFlow and building classification image recognition systems language processing and information retrieving systems for your application

Style and approach Get quickly up and running with TensorFlow using this fast paced guide

You will get to know everything that can be done with TensorFlow and we'll show you how to implement it in your environment

The examples in the book are from the core of the computation industry something you can connect to and will find familiar

**Getting Started with Deep Learning** Ricardo Calix, 2017-01-18 Ever since 2007 with the explosion in the use of parallel hardware the field of machine learning has become more exciting and more promising

It seems that the dream of true AI is finally just around the corner

Certainly there are many companies that are starting to rely heavily on AI for their products

These include companies in search like Facebook Google as well as retailers and multimedia companies like Amazon and Netflix

But more recently many others in the health care and cyber security industries are also interested in what AI and machine learning can do for them

Some of these technologies such as Tensorflow which came about around 2015 are new and not widely understood

In this book I hope to provide basic discussions of machine learning

and in particular deep learning to help readers to quickly get started in using these technologies The book is not a comprehensive survey on deep learning There are many topics I do not cover here as too much material can be overwhelming to the uninitiated There are many good books that cover all the theory in depth and I will mention some of them in the book Instead the goal in this book is to help people new to deep learning to quickly get started with these concepts using python and Tensorflow Therefore a lot of detail is spent on helping the reader to write his or her first deep network classifier Additionally I will try to connect several elements in machine learning which I think are related and are very important for data analysis and automatic classification In general I prefer python and I will try to present all examples using this great language I will also use the more common libraries and the Linux development environment Many people use SKlearn and I have therefore tried to use this library in the Tensorflow examples so that the focus is mainly on creating the deep layer network architectures

to grips with tensors deep learning and neural networks can be intimidating and confusing for anyone no matter their experience level The breadth of information out there often written at a very high level and aimed at advanced practitioners can make getting started even more challenging If this sounds familiar to you The TensorFlow Workshop is here to help Combining clear explanations realistic examples and plenty of hands on practice it ll quickly get you up and running You ll start off with the basics learning how to load data into TensorFlow perform tensor operations and utilize common optimizers and activation functions As you progress you ll experiment with different TensorFlow development tools including TensorBoard TensorFlow Hub and Google Colab before moving on to solve regression and classification problems with sequential models Building on this solid foundation you ll learn how to tune models and work with different types of neural network getting hands on with real world deep learning applications such as text encoding temperature forecasting image augmentation and audio processing By the end of this deep learning book you ll have the skills knowledge and confidence to tackle your own ambitious deep learning projects with TensorFlow What you will learn

Get to grips with TensorFlow s mathematical operations  
Pre process a wide variety of tabular sequential and image data  
Understand the purpose and usage of different deep learning layers  
Perform hyperparameter tuning to prevent overfitting of training data  
Use pre trained models to speed up the development of learning models  
Generate new data based on existing patterns using generative models

Who this book is for  
This TensorFlow book is for anyone who wants to develop their understanding of deep learning and get started building neural networks with TensorFlow Basic knowledge of Python programming and its libraries as well as a general understanding of the fundamentals of data science and machine learning will help you grasp the topics covered in this book more easily
