### Range Measurement Applications

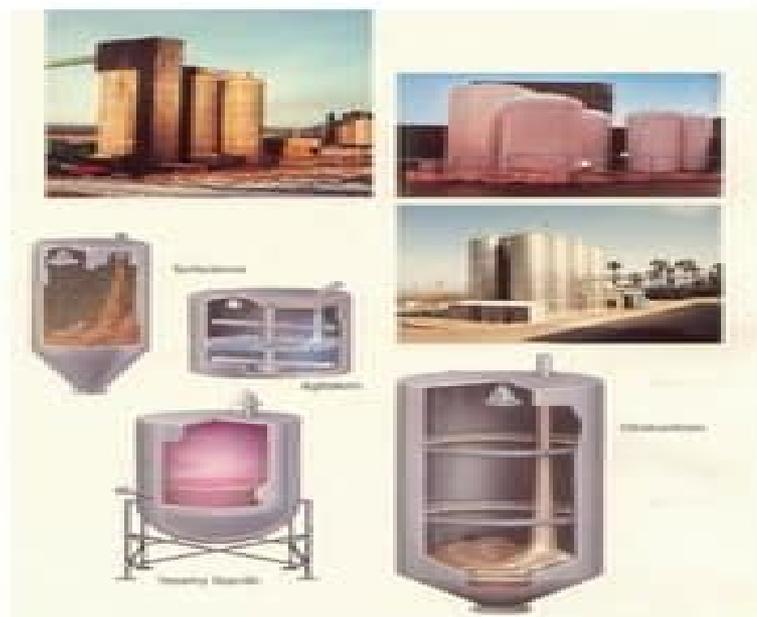

Figure 7.1: Industrial range measurement applications

Probably one of the greatest visions of the process industry has been a truly wire-and-rotate non-contact, non-intrusive continuous level measurement instrument, a single technology that can be used in every application, a device that is self-calibrating and maintenance-free, that is easy to install onto any vessel with any process connection. At the same time this device should offer an accuracy to within 1mm, it must be low-cost and capable of paying for itself in under three months while able to operate in excess of 20 years. *S.A. Instrumentation and Control, May 1998*

**Precision FMCW Short-Range Radar for Industrial Applications** Boris A. Atayants, Viacheslav M.

Davydochkin, Victor V. Ezerskiy, Valery S. Parshin, Sergey M. Smolskiy, 2014-04-01 This book describes methods for making accurate radar measurements of short distances in applications where physical contact with materials is impractical. Sources of error are identified and methods of reducing these errors are described. Practical test procedures for measuring instruments are also provided. Much of the book is dedicated to providing radar engineers with practical applications detailing the conditions, equipment, and approach of experimental estimation. With the help of computer simulation, the achievable advantages in accuracy of radar range measurement with various approaches are revealed and quantitatively estimated. Readers are also provided with methods of random process theory and mathematical statistics along with functional analysis and optimization.

**Measuring the Performance of the Hollow State** David G.

Frederickson, 2006-10-16 Measuring the Performance of the Hollow State is the first in-depth look at the influence of performance measurement on the effectiveness of the federal government. To do this, the authors examine the influence of the Government Performance and Results Act of 1993 with consideration of the later Program Assessment Rating Tool of 2002 on federal performance measurement, agency performance, and program outcomes. They focus on a systematic examination of five agencies in the U.S. Department of Health and Human Services: the Food and Drug Administration, the Centers for Medicare and Medicaid Services, the Health Resources and Services Administration, the National Institutes of Health, and the Indian Health Service. Besides representing a wide range of federal government organizational structures and program formats, these agencies offer a diverse array of third-party arrangements including states, native American tribes, scientists, medical schools, and commercial and nonprofit health care intermediaries and carriers. Exploring the development of performance measures in light of widely varying program mandates, the authors look at issues that affect the quality of this measurement and particularly the influence of program performance by third parties. They consider factors such as goal conflict and ambiguity, politics, and the critical role of intergovernmental relations in federal program performance and performance measurement. Through their findings, they offer illumination to two major questions in public management today: what are the uses and limitations of performance measurement as a policy and management tool, and how does performance measurement work when applied to the management of third-party government? While scholars and students in public administration and governmental reform will find this book of particular interest, it will also be of use to anyone working in the public sector who would like to have a better understanding of performance measurement.

**Industrial Applications of Laser Remote Sensing** Tetsuo Fukuchi, Tatsuo Shiina, 2012 This e-book is an essential review of land-based laser sensing methods such as differential absorption, Raman scattering, laser-induced fluorescence, Doppler effect methods, laser-induced breakdown spectroscopy, and laser ultrasonics, and their respective applications to specific industrial needs such as natural gas leak
