Turbulence and Self-Organization Mikhail Ya Marov,Aleksander V. Kolesnichenko,2013-01-16 The book deals with the development of continual models of turbulent natural media Such models serve as a ground for the statement and numerical evaluation of the key problems of the structure and evolution of the numerous astrophysical and geophysical objects The processes of ordering self organization in an originally chaotic turbulent medium are addressed and treated in detail with the use of irreversible thermodynamics and stochastic dynamics approaches which underlie the respective models Different examples of ordering set up in the natural environment and outer space are brought and thoroughly discussed the main focus being given to the protoplanetary discs formation and evolution

The Statistical Mechanics of Irreversible

Phenomena Pierre Gaspard,2022-07-28 This book provides a comprehensive and self contained overview of recent progress in nonequilibrium statistical mechanics in particular the discovery of fluctuation relations and other time reversal symmetry relations The significance of these advances is that nonequilibrium statistical physics is no longer restricted to the linear regimes close to equilibrium but extends to fully nonlinear regimes These important new results have inspired the development of a unifying framework for describing both the microscopic dynamics of collections of particles and the macroscopic hydrodynamics and thermodynamics of matter itself The book discusses the significance of this theoretical framework in relation to a broad range of nonequilibrium processes from the nanoscale to the macroscale and is essential reading for researchers and graduate students in statistical physics theoretical chemistry and biological physics

Non-equilibrium Statistical Physics with Application to Disordered Systems Manuel Osvaldo Cáceres,2017-03-07 This textbook is the result of the enhancement of several courses on non equilibrium statistics stochastic processes stochastic differential equations anomalous diffusion and disorder The target audience includes students of physics mathematics biology chemistry and engineering at undergraduate and graduate level with a grasp of the basic elements of mathematics and physics of the fourth year of a typical undergraduate course The little known physical and mathematical concepts are described in sections and specific exercises throughout the text as well as in appendices Physical mathematical motivation is the main driving force for the development of this text It presents the academic topics of probability theory and stochastic processes as well as new educational aspects in the presentation of non equilibrium statistical theory and stochastic differential equations In particular it discusses the problem of irreversibility in that context and the dynamics of Fokker Planck An introduction on fluctuations around metastable and unstable points are given It also describes relaxation theory of non stationary Markov periodic in time systems The theory of finite and infinite transport in disordered networks with a discussion of the issue of anomalous diffusion is introduced Further it provides the basis for establishing the relationship between quantum aspects of the theory of linear response and the calculation of diffusion coefficients in amorphous systems
