Cognitive Strategies in motor learning and Rehabilitation Giovanni Buccino, Andrea Demeco, Cosimo Costantino, Daniel L. Eaves, 2025-11-27 Over the past 20 years there has been a significant shift in our understanding of the motor system It is no longer viewed as a mere executor of motor actions but rather as a system also engaged during action observation and recognition imagination and even verbal descriptions of actions It is currently unclear to what extent the neural structures involved in these functions overlap with each other or are distinctively and differently active across functions We will use the term action re enactment to refer to the recruitment of neural structures that are involved in action execution in the absence of physical execution itself Within this theoretical framework there is increasing interest in the role of cognitive strategies that exploit action re enactment like motor imagery and action observation in motor learning and rehabilitation By observation imitation and imagery of movements we can acquire new motor skills and refine our motor abilities possibly via the re organization of already acquired and well established motor competence Hence the potential role of these cognitive strategies in sports training and educational activities for example learning a musical instrument These cognitive strategies are also useful in the case of neurological and non neurological diseases when patients must recover their affected motor skills Action observation treatment and motor imagery have proven to be effective for motor rehabilitation of patients with stroke Parkinson s disease cerebral palsy and

patients with orthopedic diseases This Research Topic aims to offer a state of the art overview of the recent advancements in cognitive strategies that involve action re enactment We will collect papers focusing on the neurophysiological and anatomical bases of motor imagery and action observation recognition as well as their use in learning re learning as in the case of rehabilitation motor skills in social contexts as well as in clinical practice Moreover papers assessing the effectiveness of these cognitive strategies when combined or associated with other approaches like virtual reality and the use of wearable devices along with studies on the use of these cognitive strategies in home based training will be of interest We will include articles exploiting neurophysiological brain imaging and behavioral techniques Considering the relevance and huge potential application of cognitive strategies in different contexts we hope this Research Topic will meet the interest of different researchers including psychologists neuroscientists sports scientists neurologists psychiatrists and physiotherapists

Subject Guide to Books in Print, 2001 **Mental Health, Social Media, and the Meta** Dov Greenbaum ,Nazanin Alavi,2024-11-11 One of the most damaging externalities from the recent pandemic has been the rise in mental health issues Many psychiatric disorders have strong genetic components and although the extent of the genetic influence for many conditions has been extensively tested by genome wide association studies GWAS there remains much to be understood regarding the genetics of these health issues Twin studies for example have found a relatively high rate of inheritance for depression and anxiety disorders To better appreciate the role that genetics plays in these disorders it is useful to understand the extent to which other factors also contribute to the condition Other major contributing factors to mental disorders are the environment and psychological factors These environmental and psychological concerns have been further exacerbated by the growth of social media and the requirement especially for young adults and teenagers to always be on It is likely that the metaverse in whatever form it ultimately takes will further exacerbate these conditions On the other hand social media and the metaverse can be tools to help those suffering from mental health conditions Online therapists and bots can provide frontline care to those who can t or won t go to an in person therapy session AI can be employed to provide some forms of therapy in light of the growing demand for licensed therapists and the limited supply **The British National**
