

**Management Accounting for BE**  
**Integrated case questions**  
**Week 4**  
**Cost-volume-profit analysis**

**Purpose**

The purpose of this problem is to go through the complete workflow of Cost-Volume-Profit (CVP) analyses. Based on a simple example, you will now successively:

- Build a profit equation,
- Compute a volume and revenue at break-even for a single product,
- Compute a volume and revenue at target profit for a single product,
- Build a contribution income statement,
- Compute and interpret margin of safety and operating leverage,
- Compute a multi-product break-even.

Let's start!

**Case information**

Noelle gave you the following income statements for the previous two months of activity:

Account	February	March
Revenues	1,500,000	1,125,000
Cost of goods sold	-790,000	-662,500
Gross margin	710,000	462,500
Period cost	-210,000	-187,500
Operating income	500,000	275,000

*Table 1. Financial income statement*

You can assume that the volumes of both months were on the same relevant range. The Chief Marketing Officer expects sales to **decrease in April**. She forecasted a total volume of **215,000 bags of N&Ns sold**. The CEO of the company asked Noelle to make some projections for the next month of activity, April, and to help him make some decisions to achieve a **target profit of 350,000.00 euros**.
