

## OPERATIONAL MANAGEMENT AND CASE STUDY

### Q. 1. Why is operational management important in CRM?

Answer:

The success of goods or services involving manufacturing or processing depend upon design, specifications, materials, components or sub-components. It is critical and important activity for the organization. The efficient operations ensure the production or service as a customer commitment and that ability to produce is usually dependent on the performance, price, quantity, reliability and processes (as mentioned in the strategic aspect of the business in the long run). Hence, processes and operations represent management in the management of goods or services that create goods and/or services. Hence, the operations business activities show the capability that will form the long-term basis for their competitiveness. The example of the CRM illustrated above indicates that operations are primarily concerned with high volume, stable and often repetitive in the operations. However, in manufacturing companies there are particular types of producing goods, the operations are able to produce or also produce other types using some specialty facilities, some manufacturing cost has been reduced by using production equipment facilities required for the cost of CRM.

Operations are always responsible for creating value for the customer. They are the service and/or other value-added activities. In process, they create the operational and economic in a systematic manner. Meeting the customer needs always is their.

1. **Material and methods:** Design, materials, machine, production structure and a detailed schedule, the process, and materials. Operational management focus, especially that area of physical processes, ensuring that they are efficient, effective, and in most cases, manufacturing.
2. **Process reliability and consistency:** Consistent management by control of planning, which is consistent, timely, accurate, in process, reliability, and process cost, manufacturing, quality, meeting customer, and maintaining relationships. This helps in creating process and product that provide a competitive value position.
3. **Quality assurance:** Design, control, process is high level of quality and reliability. Operational management ensures that quality control measures are in place throughout the design process, leading to the delivery of high quality products or services.
