Communication Networks and Computer Systems Javier A. Barria, 2006 Communication networks and computer systems research is entering a new phase in which many of the established models and techniques of the last twenty years are being challenged The research community is continuing to free itself from past intellectual constraints so that it may fully exploit the convergence of computing and communications Evaluating the performance of emerging communications and computer systems constitutes a huge challenge Thus current research provides a set of heterogeneous tools and techniques embracing the uncertainties of time and space varying environments when the requests for diverse services are made in real time and with very different quality of service expectations These novel techniques will lead to fast and economic service deployment and effective dynamic resource management and hence to new business strategies and infrastructures that will facilitate the emergence of future services and applications This volume contains contributions and presentations made by leading international researchers at a workshop which was held in April 2004 to honour Professor Erol Gelenbe on the occasion of his inaugural lecture as the Dennis Gabor Chair at Imperial College London

Computer Communications and Networks John R. Freer, 2012-12-06 Computer communications is one of the most rapidly developing technologies and it is a subject with which everyone in the computer systems profession should be familiar Computer communications and networks is an introduction to communications technology and system design for

practising and aspiring computer professionals The subject is described from the computer system designer's point of view rather than from the communications engineer's viewpoint The presentation is suitable for introductory reading as well as for reference The emphasis is on practical rather than theoretical aspects and on technology which will become more important in the future The majority of the subject matter applies to civil and military communications but some aspects which are unique to military applications have been included where considered significant Computer communications is a rapidly changing and highly complex subject Sufficient practical knowledge of the subject is not usually gained at university or college but is generally developed over a period of several years by trial and error attending courses reading reference books and journals this book attempts to simplify and speed up the process by bringing together a body of information which is otherwise distributed throughout many books and journals The information is presented in a framework which makes a wider understanding of the subject possible Basic knowledge of communications is assumed a general familiarity with computer systems is anticipated in later chapters and where relevant theory is explained Annotated Bibliography of the Literature on Resource Sharing Computer Networks Robert P.
