S. Chawla, 2002 Plant biotechnology has created unprecedented opportunities for the manipulation of biological systems of plants To understand biotechnology it is essential to know the basic aspects of genes and their organization in the genome of plant cells This text on the subject is aimed at students *Electroporation and Sonoporation in Developmental Biology* Harukazu Nakamura, 2009-01-31 In ovo electroporation is an epoch making achievement in the study of developmental biology With this method experiments can be carried out in gain and loss of function in desired tissue at any desired stage in chick embryos Introduction of a tetracycline regulated gene expression system and a transposon system has further extended the potential of the method making it possible to obtain long term expression and to turn on and off a gene of interest It is now applied to mice aquatic animals and even to plants for the study of developmental biology and for other purposes In this book the application of electroporation in many embryonic tissues and organs is introduced with some chapters that deal with gene transfer in adults Sonoporation another useful tool using ultrasonic waves instead of electric currents for gene transfer to mesenchymal tissues is also introduced Plant Tissue Culture and Molecular Markers Ashwani Kumar, N. S. Shekhawat, 2009 Plant tissue culture techniques help in understanding basic life processes which is essential to improving crop productivity Furthermore recently molecular biology has assumed great importance with respect to plant biotechnology This book combines all three aspects into one with a focus on practical applications of various techniques It discusses micropropagation studies on several crop plants the molecular basis of understanding various life processes including the molecular basis of somatic embryogenesis and other physiological and biochemical processes having significant biotechnological applications It also covers in vitro studies of certain important plants like Aloe vera *Simmondsia chinensis* *Anacyclus pyrethrum* and *Crataeva nurvala* *Arachis hypogaea* L *Phoenix dactylifera* *Dendrocalamus asper* *Asparagus*
