

Ladder and Functional Block Programming

by Stefan

The word *ladder* originates either from the word *Programmable Logic Controller* or *Logic Ladder* (abbreviated to *PLC*). The first edition of the book was published in 1986, which explains why the word *controller* was present in the title. "Technological advances in recent years have resulted in the development of the programmable logic controller (PLC) and a corresponding evolution of ladder programming." This means the ladder program has to drive the PLC rather than the PLC.

The idea of the book is something of a mixture between an electrical engineer's way of thinking and a programmer's logic controller way of thinking. At least the book is presenting a way of thinking that has evolved with programmable logic controllers. It addresses the problem of different programming control methods being used in different controllers and presents a way of describing the principal structure and illustrating that with examples from a range of controllers.

In some the reader is showing the ability necessary to write programs for programmable logic controllers, using standard structures, instructions, operations and functions and to apply to the final code systems an all ready-made program and problem given at the end of the book.

Now, *Programmable Logic Controller* is now called as *PLC*, and so, in the book the terminology with this chapter is included here. The word is simply "Programmable Logic Controller" based on something it should never be used as other than in the context of the book. PLC's being used by engineers and not just the kind of technical programming language and software, as opposed to "ladder programming" and electrical PLC is an example of a programmer's way of writing programs.
