Introduction to the Mathematics of Computer Graphics Nathan Carter, 2016-12-31 This text by an award winning Author was designed to accompany his first year seminar in the mathematics of computer graphics Readers learn the mathematics behind the computational aspects of space shape transformation color rendering animation and modeling The software required is freely available on the Internet for Mac Windows and Linux The text answers questions such as these How do artists build up realistic shapes from geometric primitives What computations is my computer doing when it generates a realistic image of my 3D scene What mathematical tools can I use to animate an object through space Why do movies always look more realistic than video games Containing the mathematics and computing needed for making their own 3D computer generated
