Wireless Communication and Network - Proceedings of 2015 International Workshop (iwwc2015) Akira Namatame,2015-11-30 This book is a collection of all papers presented at the 2015 International Workshop on Wireless Communication and Network IWWCN 2015 which was held on August 21 23 2015 in Kunming Yunnan China The book provides cutting edge development and signification contributions to all major fields of wireless communication and network The book will benefit global researchers and practitioners in the field

Agricultural Internet of Things and Decision Support for Precision Smart Farming Annamaria Castrignano,Gabriele Buttafuoco,Raj Khosla,Abdul Mouazen,Dimitrios Moshou,Olivier Naud,2020-01-09 Agricultural Internet of Things and Decision Support for Smart Farming reveals how a set of key enabling technologies KET related to agronomic management remote and proximal sensing data mining decision making and automation can be efficiently integrated in one system Chapters cover how KETs enable real time monitoring of soil conditions determine real time site specific requirements of crop systems help develop a decision support system DSS aimed at maximizing the efficient use of resources and provide planning for agronomic inputs differentiated in time and space This book is ideal for researchers academics post graduate students and practitioners who want to embrace new agricultural technologies Presents the science behind smart technologies for agricultural management Reveals the power of data science and how to extract meaningful insights from big data on what is most suitable based on individual time and space Proves how advanced technologies used in agriculture practices can become site specific locally adaptive operationally feasible and economically affordable

Data Analytics Shuai Huang,Houtao Deng,2021-04-15 Data Analytics A Small Data Approach is suitable for an introductory data analytics course to help students understand some main statistical learning models It has many small datasets to guide students to work out pencil solutions of the models and then compare with results obtained from established R packages Also as data science practice is a process that should be told as a story in this book there are many course materials about exploratory data analysis residual analysis and flowcharts to develop and validate models and data pipelines The main models covered in this book include linear regression logistic regression tree models and random forests ensemble learning sparse learning principal component analysis kernel methods including the support vector machine and kernel regression and deep learning Each chapter introduces two or three techniques For each technique the book highlights the intuition and rationale first then shows how mathematics is used to articulate the intuition and formulate the learning problem R is used to implement the techniques on both simulated and real world dataset Python code is also available at the book s website <http://dataanalyticsbook.info>

Large-Scale and Distributed Optimization Pontus Giselsson,Anders Rantzer,2018-11-11 This book presents tools and methods for large scale and distributed optimization Since many methods in Big Data fields rely on solving large scale optimization problems often in distributed fashion this topic has over the last decade emerged to become very important As well as specific coverage of this active research field the book

serves as a powerful source of information for practitioners as well as theoreticians Large Scale and Distributed Optimization is a unique combination of contributions from leading experts in the field who were speakers at the LCCC Focus Period on Large Scale and Distributed Optimization held in Lund 14th 16th June 2017 A source of information and innovative ideas for current and future research this book will appeal to researchers academics and students who are interested in large scale optimization

Encyclopedia of Mathematical Geosciences B. S. Daya Sagar, Qiuming Cheng, Jennifer McKinley, Frits Agterberg, 2023-07-13 The Encyclopedia of Mathematical Geosciences is a complete and authoritative reference work It provides concise explanation on each term that is related to Mathematical Geosciences Over 300 international scientists each expert in their specialties have written around 350 separate articles on different topics of mathematical geosciences including contributions on Artificial Intelligence Big Data Compositional Data Analysis Geomathematics Geostatistics Geographical Information Science Mathematical Morphology Mathematical Petrology Multifractals Multiple Point Statistics Spatial Data Science Spatial Statistics and Stochastic Process Modeling Each topic incorporates cross referencing to related articles and also has its own reference list to lead the reader to essential articles within the published literature The entries are arranged alphabetically for easy access and the subject and author indices are comprehensive and extensive

The Cambridge Encyclopedia of Child Development Brian Hopkins, Elena Geangu, Sally Linkenauger, 2017-10-19 Updated and expanded to 124 entries The Cambridge Encyclopedia of Child Development remains the authoritative reference in the field

Handbook of Research on Advancements of Swarm Intelligence Algorithms for Solving Real-World Problems Cheng, Shi, Shi, Yuhui, 2020-04-24 The use of optimization algorithms has seen an emergence in various professional fields due to its ability to process data and information in an efficient and productive manner Combining computational intelligence with these algorithms has created a trending subject of research on how much more beneficial intelligent inspired algorithms can be within companies and organizations As modern theories and applications are continually being developed in this area professionals are in need of current research on how intelligent algorithms are advancing in the real world The Handbook of Research on Advancements of Swarm Intelligence Algorithms for Solving Real World Problems is a pivotal reference source that provides vital research on the development of swarm intelligence algorithms and their implementation into current issues While highlighting topics such as multi agent systems bio inspired computing and evolutionary programming this publication explores various concepts and theories of swarm intelligence and outlines future directions of development This book is ideally designed for IT specialists researchers academicians engineers developers practitioners and students seeking current research on the real world applications of intelligent algorithms

Probabilistic Graphical Models Daphne Koller, Nir Friedman, 2009-07-31 A general framework for constructing and using probabilistic models of complex systems that would enable a computer to use available information for making decisions Most tasks require a person or an automated system to reason to reach conclusions based on available information The framework of probabilistic graphical models

presented in this book provides a general approach for this task. The approach is model based, allowing interpretable models to be constructed and then manipulated by reasoning algorithms. These models can also be learned automatically from data, allowing the approach to be used in cases where manually constructing a model is difficult or even impossible. Because uncertainty is an inescapable aspect of most real world applications, the book focuses on probabilistic models which make the uncertainty explicit and provide models that are more faithful to reality. Probabilistic Graphical Models discusses a variety of models spanning Bayesian networks, undirected Markov networks, discrete and continuous models, and extensions to deal with dynamical systems and relational data. For each class of models, the text describes the three fundamental cornerstones: representation, inference, and learning, presenting both basic concepts and advanced techniques. Finally, the book considers the use of the proposed framework for causal reasoning and decision making under uncertainty. The main text in each chapter provides the detailed technical development of the key ideas. Most chapters also include boxes with additional material: skill boxes which describe techniques, case study boxes which discuss empirical cases related to the approach described in the text, including applications in computer vision, robotics, natural language understanding, and computational biology, and concept boxes which present significant concepts drawn from the material in the chapter. Instructors and readers can group chapters in various combinations from core topics to more technically advanced material to suit their particular needs.

Biennial Issue for ... Montana State University--Bozeman, 1974 *Proceedings of the ... International Workshop on Petri Nets and Performance Models*, 1995 Probabilistic Graphical Models Luis Enrique Sucar, 2020-12-23. This fully updated new edition of a uniquely accessible textbook reference provides a general introduction to probabilistic graphical models (PGMs) from an engineering perspective. It features new material on partially observable Markov decision processes, causal graphical models, causal discovery, and deep learning, as well as an even greater number of exercises. It also incorporates a software library for several graphical models in Python. The book covers the fundamentals for each of the main classes of PGMs, including representation, inference, and learning principles, and reviews real world applications for each type of model. These applications are drawn from a broad range of disciplines, highlighting the many uses of Bayesian classifiers, hidden Markov models, Bayesian networks, dynamic and temporal Bayesian networks, Markov random fields, influence diagrams, and Markov decision processes. Topics and features: Presents a unified framework encompassing all of the main classes of PGMs. Explores the fundamental aspects of representation, inference, and learning for each technique. Examines new material on partially observable Markov decision processes and graphical models. Includes a new chapter introducing deep neural networks and their relation with probabilistic graphical models. Covers multidimensional Bayesian classifiers, relational graphical models, and causal models. Provides substantial chapter ending exercises, suggestions for further reading, and ideas for research or programming projects. Describes classifiers such as Gaussian Naive Bayes, Circular Chain Classifiers, and Hierarchical Classifiers with Bayesian Networks. Outlines the practical application of the different techniques.

Suggests possible course outlines for instructors This classroom tested work is suitable as a textbook for an advanced undergraduate or a graduate course in probabilistic graphical models for students of computer science engineering and physics Professionals wishing to apply probabilistic graphical models in their own field or interested in the basis of these techniques will also find the book to be an invaluable reference Dr Luis Enrique Sucar is a Senior Research Scientist at the National Institute for Astrophysics Optics and Electronics INAOE Puebla Mexico He received the National Science Prize en 2016
