Moore, 2004 The purpose of the Guide to the Software

Engineering Body of Knowledge is to provide a validated classification of the bounds of the software engineering discipline and topical access that will support this discipline. The Body of Knowledge is subdivided into ten software engineering Knowledge Areas (KA) that differentiate among the various important concepts, allowing readers to find their way quickly to subjects of interest. Upon finding a subject, readers are referred to key papers or book chapters. Emphases on engineering practice lead the Guide toward a strong relationship with the normative literature. The normative literature is validated by consensus formed among practitioners and is concentrated in standards and related documents. The two major standards bodies for software engineering, IEEE Computer Society Software and Systems Engineering Standards Committee and ISO IEC JTC1 SC7, are represented in the project.

Effective Software Maintenance and Evolution Stanislaw Jarzabek, 2007-05-07. With software maintenance costs averaging 50% of total computing costs, it is necessary to have an effective maintenance program in place. Aging legacy systems, for example, pose an especially rough challenge as veteran programmers retire and their successors are left to figure out how the systems operate. This book explores program analyzers, reverse engineering, and other techniques for maintaining and evolving software systems.

Generative and Transformational Techniques in Software Engineering II Ralf Lämmel, Joost Visser, João Saraiva, 2008-10-08. The second instance of the international summer school on Generative and Transformational Techniques in Software Engineering (GTTSE) 2007 was held in Braga, Portugal, during July 2-7, 2007. This volume contains an augmented selection of the material presented at the school, including full tutorials, short tutorials, and contributions to the participants' workshop. The GTTSE summer school series brings together PhD students, lecturers, technology presenters, as well as other researchers and practitioners who are interested in the generation and the transformation of programs, data models, metamodels, documentation, and entire software systems. This concerns many areas of software engineering: software reverse engineering, model-driven engineering, automated software engineering, generic language technology, to name a few. These areas differ with regard to the specific sorts of metamodels or grammars, schemas, formats, etc., that underlie the involved artifacts, and with regard to the specific techniques that are employed for the generation and the transformation of the artifacts. The first instance of the school was held in 2005, and its proceedings appeared as volume 4143 in the LNCS series.
